US Infrastructure Aman Khan, Klaus Becker, 2019-09-17. This book presents an in-depth look at US infrastructure and its challenges in the 21st century. While infrastructure has received considerable attention in recent years, much of the discussion has concentrated on physical, economic or noneconomic conditions. The Trump administration has heightened interest in the topic, promising infrastructure spending during his tenure, yet little demonstrable progress has been made. This book brings together a multi-disciplinary perspective: structural, technological, economic, financial, political, planning and policy, that has been largely absent in discussions on the subject, to provide a clearer and broader understanding of the challenges facing US infrastructure. The book is divided into three parts: Part I looks at the challenges from a structural, technological and sustainability perspective; Part II from an economic, productivity and finance perspective; and Part III from an institutional, security and political perspective. Written primarily for policy makers, managers and administrators in public and private organizations as well as individuals and academics with an interest in the future of US infrastructure, this book provides an in-depth analysis of the US infrastructure problem, its causes and consequences, and suggests timely, specific measures that may be taken at the state, local and federal levels to improve and better secure our roads, transit, public buildings, economy and technology.

The Synthetic Nitrogen Industry in World War I Anthony S. Travis, 2015-07-03. This concise brief describes how the demands of World War I, often referred to as the Chemists War, led to the rapid emergence of a new key industry based on fixation of atmospheric nitrogen. Then, as now, nitrogen products including nitric acid and nitrates were essential for both fertilizers and in the manufacture of modern explosives. During the first decade of the twentieth century, this stimulated research into and application of novel processes. This book illustrates how, from late 1914, the relations and developments in the first modern military industrial complex enabled the great capital expenditures and technological advances that accelerated massive expansion, particularly of the BASF Haber-Bosch high pressure process, that determined the direction of the post-war
