Daniel S. Pipkins,Satya N. Atluri,1996 BUCKDEL performs geometrically nonlinear analysis of stiffened laminated composite plates with and without delaminations BUCKDEL allows the user to perform a linear static solution a linear buckling eigenvalue analysis and a nonlinear post buckling analysis through both limit and bifurcation points There are two finite elements in BUCKDEL a quasi conforming triangular laminated plate element based on a refined first order shear theory with seven degrees of freedom per node and a fiber reinforced beam element with seven degrees of freedom per node The behavior of all materials is assumed to be linearly elastic The multi domain modeling method is used for the analysis of laminated plates containing delaminations In this model the delaminate base and the undelaminate are modeled as 3 distinct On the delamination front Mindlin s deformation assumption is applied to obtain the relationship between the displacements in the delaminate base and undelaminate      *Nonlinear Random Response Prediction Using MSC/NASTRAN* Jay Howard Robinson,1993      **A Collection of Technical Papers** ,1983      Automated Structural Optimization System (ASTROS).
