

ETC® User Manual Supplement

SmartFade ML v1.2

Changes SmartFade ML v1.2

There are three changes in version 1.2 from the current released version, v1.1

- Facility to build a *custom moving light personality* in the console
- Simplifications to Edit, separation of data and *time edit* functions
- Changes to *default times settings*.

Custom Moving Light Personalities

Previous versions of SmartFade ML relied solely on the in-built personality file to provide patches for moving lights. If a moving light was not included the user would have to wait until such time that Carillon and ETC were able to update their files. Occasionally this can be difficult if, for instance, the moving light manufacturer does not provide detailed patching information, or the device has been obsolete for some time.

Now it's possible to build up to 20 user personalities using that are stored with the show. The personalities can be built on-line, and this is probably the best way to ensure that they are working properly with the intended device. They are patched from the Patch Wizard as any other personality, and appear before the factory personalities. If they need to be edited after being patched - they must be repatched for the changes to be updated.

Open the Personality Editor

- Step 1: Select the menu Patch Personalities
Menu>Patch>Patch Devices> [User Personalities]

	DMX	User Personality
[91]>	[401]	[20]

Use **MORE** to select Universe (U1/U2)

Use the encoder 2 to set the DMX address for the connected device to be able to test the personality live.

Use the right wheel to select which personality to edit/create (1-20).

- Step 2: Press **OK** to confirm. You will have a choice of **editing** an existing personality or **Erase & make a new one**. Make your selection with encoder 3.

	User Personality
	[Erase & make new]

- Step 3: Press **OK** to confirm. This is the programming interface for creating a personality.

OFFSET	RHX	RSNE	Assigned to:
[1]	[CHV]	[]	None

- Step 4: You are ready to edit/create the selected personality. There are two methods - **live** (with faders) and **tilde** (in the display only). The easiest method is live with the device connected.
