Property $(\$T\$)$ for Groups Graded by Root Systems Mikhail Ershov, Andrei Jaikin-Zapirain, Martin Kassabov, 2017-09-25 The authors introduce and study the class of groups graded by root systems They prove that if G is an irreducible classical root system of rank n and Γ is a group graded by G then under certain natural conditions on the grading the union of the root subgroups is a Kazhdan subset of G As the main application of this theorem the authors prove that for any reduced irreducible classical root system of rank n and a finitely generated commutative ring with the Steinberg group and the elementary Chevalley group have property $(\$T\$)$ They also show that there exists a group with property $(\$T\$)$ which maps onto all finite simple groups of Lie type and rank n thereby providing a unified proof of expansion in these groups

Topologically Protected States in One-Dimensional Systems Charles Fefferman, James P. Lee-Thorp, M. I. Weinstein, 2017-04-25 The authors study a class of periodic Schrodinger operators which in distinguished cases can be proved to have linear band crossings or Dirac points They then show that the introduction of an edge via adiabatic modulation of these periodic potentials by a domain wall results in the bifurcation of spatially localized edge states These bound states are associated with the topologically protected zero energy mode of an asymptotic one dimensional Dirac operator The authors model captures many aspects of the phenomenon of topologically protected edge states for two dimensional bulk structures such as the honeycomb structure of graphene The states the authors construct can

be realized as highly robust TM electromagnetic modes for a class of photonic waveguides with a phase defect
