The Unified Learning Model Duane F. Shell, David W. Brooks, Guy Trainin, Kathleen M. Wilson, Douglas F. Kauffman, Lynne M. Herr, 2009-12-01 This is a book about how humans learn Our focus is on classroom learning although the principles are as the name of this book indicates universal We are concerned with learning from pre school to post graduate We are concerned with most business industrial and military training We do not address how infants learn how to speak or walk or how grown ups improve their tennis swing We do address all learning described by the word thought as well as anything we might try to teach or instruct in formal educational settings In education the words theory and model imply conjecture In science these same words imply something that is a testable explanation of phenomena able to predict outcomes of experiments This book presents a model of learning that the authors offer in the sense of scientists rather than educators Conjecture implies that information is incomplete and so it surely is with human learning On the other hand we assert that more than enough is known to sustain a

scientific model of learning This book is not a review of the literature Instead it is a synthesis Scholars and many teachers likely have heard much if not most or even all of the information we use to develop the unified learning model What you have not read before is a model putting the information together in just this way this is the first one **Developing Models in Science Education** J.K. Gilbert, C. Boulter, 2012-12-06 Models and modelling play a central role in the nature of science in its conduct in the accreditation and dissemination of its outcomes as well as forming a bridge to technology They therefore have an important place in both the formal and informal science education provision made for people of all ages This book is a product of five years collaborative work by eighteen researchers from four countries It addresses four key issues the roles of models in science and their implications for science education the place of models in curricula for major science subjects the ways that models can be presented to are learned about and can be produced by individuals the implications of all these for research and for science teacher education The work draws on insights from the history and philosophy of science cognitive psychology sociology linguistics and classroom research to establish what may be done and what is done The book will be of interest to researchers in science education and to those taking courses of advanced study throughout the world
