fills this gap He first examines convergent regularities at both temporal and phylogenetic depths finding evidence that both vindicates and rebuffs Gould's argument for contingency Powell follows this partial defense of the RCT with a substantive critique Among the evolutionary outcomes that might defy the RCT he argues cognition is particularly important not only for human specific issues of the evolution of intelligence and consciousness but also for the large scale ecological organization of macroscopic living worlds Turning his attention to complex cognitive life Powell considers what patterns of cognitive convergence tell us about the nature of mind its evolution and its place in the universe If complex bodies are common in the universe might complex minds be common as well

The Organisation of Tomorrow Mark Van Rijmenam, 2019-07-19 The Organisation of Tomorrow presents a new model of doing business and explains how big data analytics blockchain and artificial intelligence force us to rethink existing business models and develop organisations that will be ready for human machine interactions. It also asks us to consider the impacts of these emerging information technologies on people and society. Big data analytics empowers consumers and employees. This can result in an open strategy and a better understanding of the changing environment. Blockchain enables peer to peer collaboration and trustless interactions governed by cryptography and smart contracts. Meanwhile artificial intelligence allows for new and different levels of intensity and involvement among human and artificial actors. With that new modes of organising are emerging where technology facilitates collaboration between stakeholders and where human to human interactions are increasingly replaced with human to machine and even machine to machine interactions. This book offers dozens of examples of industry leaders such as Walmart Telstra Alibaba Microsoft and T Mobile before presenting the D2 A2 model a new model to help organisations datafy their business distribute their data analyse it for insights and automate processes and customer touchpoints to be ready for the data driven and exponentially changing society that is upon us. This book offers governments professional services manufacturing finance retail and other industries a clear approach for how to develop products and services that are ready for the twenty first century. It is a must read for every organisation that wants to remain competitive in our fast changing world.
