Some material deals with cutting edge published research articles and provides a useful resource for open problems in nonlinear dynamical systems Readers are guided through theory via example and the graphical MATLAB interface The Simulink accessory is used to simulate real world dynamical processes Examples from mechanics electric circuits economics population dynamics epidemiology nonlinear optics materials science and neural networks Over 330 illustrations 300 examples and exercises with solutions Aimed at senior undergraduates graduate students and working scientists in various branches of engineering applied mathematics and the natural sciences

Computational Methods in Physics and Engineering Samuel Shaw Ming Wong, **GSA Supply Catalog**, 2001 *Computational Methods In Physics And Engineering (2nd Edition)* Samuel S M Wong, 1997-03-15 Numerical methods are playing an ever increasing role in physics and engineering This is especially true after the recent explosion of computing power on the desk top This book is aimed at helping the user to make intelligent use of this power tool Each method is introduced through realistic examples and actual computer programs The explanations provide the background for making a choice between similar approaches and the knowledge to explore the network for the appropriate existing codes Tedious proofs and derivations on the other hand are delegated to references Examples of unconventional methods are also given to stimulate readers in exploring new ways of solving problems

Dynamical Systems with Applications using Mathematica® Stephen Lynch, 2007-10-01 This book provides an introduction to the theory of dynamical systems with the aid of the Mathematica computer algebra package The book has a very hands on approach and takes the reader from basic theory to recently published research material Emphasized throughout are numerous applications to biology chemical kinetics economics electronics epidemiology nonlinear optics mechanics population dynamics and neural networks Theorems and proofs are kept to a minimum The first section deals with continuous systems using ordinary differential equations while the second part is devoted to the study of discrete dynamical systems
