## Evaluating Polynomial Functions

For each of the following polynomial functions:

- Describe the end behavior of the functions.
- Find all real zeros of the functions.
- Determine the multiplicity of each zero and the number of turning points of the graph of the function.
- Sketch the graph. Find the  $x$  and  $y$  intercepts.

①  $f(x) = x^3 + 3x^2 - 4$

**Discovering Mathematics with Maple** R.J. Stroecker,J.F. Kaashoek,2012-12-06 his book grew out of the wish to let students of econometrics get acquainted with the powerful techniques of computer algebra at an early stage in their curriculum As no textbook available at the time met our requirements as to content and presentation we had no other choice than to write our own course material The try out on a group of 80 first year students was not without success and after adding some necessary modifications the same material was presented to a new group of students of similar size the year after Some more adjustments were made and the final result now lies before you Working with computer algebra packages like Derive Mathematica and Maple over many years convinced us of the favourable prospects of computer algebra as a means of improving the student's understanding of the difficult concepts on which mathematical techniques are often based Moreover advanced mathematical education be it for mathematics itself or for mathematical statistics operations research and other branches of applied mathematics can greatly profit from the large amount of non trivial mathematical knowledge that is stored in a computer algebra system Admittedly the fact remains that many a tough mathematical problem such as solving a complicated non linear system or obtaining a finite expression for a multiple parameter integral can not easily be handled by computer algebra either if at all
