Modernization Of China's Agricultural Production Organizations Cao Yang, 2023-03-10 This book constructs a new theoretical framework for understanding contemporary Chinese agricultural production organizations from the perspective of promoting farmers realization of substantial freedom and feasible ability The new theoretical framework deepens and expands the theory of agricultural modernization and production organizations. The book discusses the multi symbiosis pattern of agricultural production organizations in contemporary China from macro and micro economics perspectives Based on the peasant household economy this multi symbiosis organizational structure co exists and interweaves with various forms of economic organizations. The book points out that this multi symbiosis organizational structure is the result of free choice of the majority of farmers since the reform and opening up in turn it also provides a broader organizational and institutional

space for farmers diversified choices The book predicts that China's agricultural production organization networking will gradually move towards networking based on diversification and also form networked organization groups Voices from the Forest Malcolm Cairns, 2010-09-30 This handbook of locally based agricultural practices brings together the best of science and farmer experimentation vividly illustrating the enormous diversity of shifting cultivation systems as well as the power of human ingenuity Environmentalists have tended to disparage shifting cultivation sometimes called swidden cultivation or slash and burn agriculture as unsustainable due to its supposed role in deforestation and land degradation However a growing body of evidence indicates that such indigenous practices as they have evolved over time can be highly adaptive to land and ecology In contrast scientific agricultural solutions imposed from outside can be far more damaging to the environment Moreover these external solutions often fail to recognize the extent to which an agricultural system supports a way of life along with a society s food needs They do not recognize the degree to which the sustainability of a culture is intimately associated with the sustainability and continuity of its agricultural system Unprecedented in ambition and scope Voices from the Forest focuses on successful agricultural strategies of upland farmers More than 100 scholars from 19 countries including agricultural economists ecologists and anthropologists collaborated in the analysis of different fallow management typologies working in conjunction with hundreds of indigenous farmers of different cultures and a broad range of climates crops and soil conditions By sharing this knowledge and combining it with new scientific and technical advances the authors hope to make indigenous practices and experience more widely accessible and better understood not only by researchers and development practitioners but by other communities of farmers around the world
