throughout the book in the context of its practical application New coverage includes total quality management pay for performance the rising temporary workforce and downsizing Decisions and Orders of the National Labor Relations Board United States. National Labor Relations Board,2011-06 *Unequal Time* Dan Clawson,Naomi Gerstel,2014-07-10 Life is unpredictable Control over one's time is a crucial resource for managing that unpredictability keeping a job and raising a family But the ability to control one's time much like one's income is determined to a significant degree by both gender and class In *Unequal Time* sociologists Dan Clawson and Naomi Gerstel explore the ways in which social inequalities permeate the workplace shaping employees' capacities to determine both their work schedules and home lives and exacerbating differences between men and women and the economically privileged and disadvantaged *Unequal Time* investigates the interconnected schedules of four occupations in the health sector professional class doctors and nurses and working class EMTs and nursing assistants While doctors and EMTs are predominantly men nurses and nursing assistants are overwhelmingly women In all four occupations workers routinely confront schedule uncertainty or unexpected events that interrupt reduce or extend work hours Yet Clawson and Gerstel show that members of these four occupations experience the effects of schedule uncertainty in very distinct ways depending on both gender and class But doctors who are professional class and largely male have significant control over their schedules and tend to work long hours because they earn respect from their peers for doing so By contrast nursing assistants who are primarily female and working class work demanding hours because they are most likely to be penalized for taking time off no matter how valid the reasons *Unequal Time* also shows that the degree of control that workers hold over their schedules can either reinforce or challenge conventional gender roles Male doctors frequently work overtime and rely heavily on their wives and domestic workers to care for their families Female nurses are more likely to handle the bulk of their family responsibilities and use the control they have over their work schedules in order to dedicate more time to home life Surprisingly Clawson and Gerstel find that in the working class occupations workers frequently undermine traditional gender roles with male EMTs taking significant time from work for child care and women nursing assistants working extra hours to financially support their children and other relatives Employers often underscore these disparities by allowing their upper tier workers doctors and nurses the flexibility that enables their gender roles at home including for example reshaping their workplaces in order to accommodate female nurses' family obligations Low wage workers on the other hand are pressured to put their jobs before the unpredictable events they might face outside of work Though we tend to consider personal and work scheduling an individual affair Clawson and Gerstel present a provocative new case that time in the workplace also collective A valuable resource for workers advocates and policymakers alike *Unequal Time* exposes how social inequalities reverberate through a web of interconnected professional relationships and schedules significantly shaping the lives of workers and their families **Hospital Management** ,1923 **DHEW Publication** ,1973 Nursing Administration Handbook Howard S.
