Smith, John L. Gittleman, James H. Brown, 2014-08-22 Macroecology is an approach to science that emphasizes the description and explanation of patterns and processes at large spatial and temporal scales Some scientists liken it to seeing the forest through the trees giving the proverbial phrase an ecological twist The term itself was first introduced to the modern literature by James H Brown and Brian A Maurer in a 1989 paper and it is Brown s classic 1995 study Macroecology that is credited with inspiring the broad scale subfield of ecology But as with all subfields many modern day elements of macroecology are implicit in earlier works dating back decades even centuries Foundations of Macroecology charts the evolutionary trajectory of these concepts from the species area relationship and the latitudinal gradient of species richness to the relationship between body size and metabolic rate through forty six landmark papers originally published between 1920 and 1998 Divided into two parts Macroecology before Macroecology and Dimensions of Macroecology the collection also takes the long view with each paper accompanied by an original commentary from a contemporary expert in the field that places it in a broader context and explains its foundational role Providing a solid coherent assessment of the history current state and potential future of the field Foundations of Macroecology will be an essential text for students and teachers of ecology alike      The Horn Book Guide to Children's and Young Adult Books , 1999      **Haeckel's Embryos** Nick Hopwood, 2015-05-11 Emphasizing the changes worked by circulation and copying interpretation and debate this book uses the case to explore how pictures succeed and fail gain acceptance and spark controversy It reveals how embryonic development was made a process that we can see compare and discuss and how copying usually dismissed as unoriginal      **The Human Place in Nature** John Schooneveldt, 2025-04-02 This book explores a new approach to understanding the evolution of mind and consciousness by examining the perceptual abilities of animals and the way they experience their world It offers a science based bottom up approach to our own conscious worldview by seeing it through the eyes of others Emphasis is on the role of context in evolution and the way animals internalize and engage with the contextual properties of their world that are meaningful for them The core argument is that a context which is subjective and comprised of the perceptual capacities offers new insights into the evolution of mind Rather than seeing biological evolution in terms of the emergence of mindless forms and cultural

evolution as the emergence of disembodied minds the book seeks to integrate these two perspectives through the rigorous mapping of contexts Key Features Reveals an understanding of animal minds Formulates a hypothesis for the evolution of consciousness Includes a discussion of the origin of technological innovation Provides a rationale for the ecology of mind Proposes a theory of the evolution of language Outlines the science of experience and how it influences choice Explains the role of context and choice with respect especially to human ecology      *The Elementary School Library Collection*
