

Section 10-6: Secants, tangents and angle measure

Chorus

What is this section about? (Don't write)

- Section 10-6 is about shortcuts for finding the angle measures for angles created when secants and tangents intersect inside and outside of the circle
- All of the theorems that we discuss today are case specific, based on the segments that are intersecting

Identify the specific cases so that you apply the correct theorem

What is a secant?

- A line that intersects a circle in exactly 2 points is called a secant.
- When 2 secant lines intersect within the circle they form 4 angles

Secant-Secant angle measure

- Theorem: The measure of an angle created by the intersection of 2 secants is half the sum of the arcs created by the angle and the angle vertical to it.

$$m\angle 1 = \frac{1}{2}(m\widehat{AC} + m\widehat{BD})$$

$$m\angle 2 = \frac{1}{2}(m\widehat{AD} + m\widehat{BC})$$

Applying the theorem

- Find the measure of both indicated angles

$$\angle 2 = \frac{1}{2}(75 + 55) = \frac{130}{2} = 65$$

$$\angle 1 + \angle 2 = 180$$

$$\Rightarrow \angle 1 = 180 - 65 = 115$$

Secant-tangent angle measure

- Theorem: If a secant and tangent intersect at the point of tangency, then the measure of each angle formed is half of the arc that it intercepts.

$$m\angle ABC = \frac{1}{2}m\widehat{AC}$$

$$m\angle DBC = \frac{1}{2}m\widehat{EC}$$

Algebraic Geometry and Commutative Algebra Hiroaki Hijikata,Heisuke Hironaka,Masaki Maruyama,2014-05-10 Algebraic Geometry and Commutative Algebra in Honor of Masayoshi Nagata presents a collection of papers on algebraic geometry and commutative algebra in honor of Masayoshi Nagata for his significant contributions to commutative algebra Topics covered range from power series rings and rings of invariants of finite linear groups to the convolution algebra of distributions on totally disconnected locally compact groups The discussion begins with a description of several formulas for enumerating certain types of objects which may be tabular arrangements of integers called Young tableaux or some types of monomials The next chapter explains how to establish these enumerative formulas with emphasis on the role played by transformations of determinantal polynomials and recurrence relations satisfied by them The book then turns to several applications of the enumerative formulas and universal identity including including enumerative proofs of the straightening law of Doubilet Rota Stein and computations of Hilbert functions of polynomial ideals of certain determinantal loci Invariant differentials and quaternion extensions are also examined along with the moduli of Todorov surfaces and the classification problem of embedded lines in characteristic p This monograph will be a useful resource for practitioners and researchers in algebra and geometry *Honors Calculus* Charles R. MacCluer,2020-09-01 This is the first modern calculus book to be organized axiomatically and to survey the subject s applicability to science and engineering A challenging exposition of calculus in the European style it is an excellent text for a first year university honors course or for a third year analysis course The calculus is built carefully from the axioms with all the standard results deduced from these axioms The concise construction by design provides maximal flexibility for the instructor and allows the student to see the overall flow of the development At the same time the book reveals the origins of the calculus in celestial mechanics and number theory The book introduces many topics often left to the appendixes in standard calculus textbooks and develops their connections with physics engineering and statistics The author uses applications of derivatives and integrals to show how calculus is applied in
