

Web Application Penetration Testing setup

This guide aims at providing a quick introduction to conducting a **Web Application PenTest** with a basic lab setup. This is not a comprehensive course and should be used only as a basic tutorial. The tools and technologies mentioned in this guide are open source or freeware.

Legal Issues: Before conducting any kind of testing assessment one must take permission from the owner of the application in written. One common mistake people make while performing Web Application PenTest is to also test the host running the application, without the permission of the owner of the hosting system. Do not conduct any kind of test without explicit permission of the owner.

Web Applications are complex piece of Software and so is their security. With ever changing technologies and new ones being frequently introduced, vulnerabilities and attack vectors are also increasing day by day. Comprehensive testing which follows a hybrid approach is a must to identify vulnerabilities rooted deeply into the application. Let's go ahead and understand how to setup an environment and use it to perform WAPT.

H/W Requirements: A machine with minimum 2 GB RAM and a 2.0+ GHz processor would be good. Network card for network connectivity would also be required.

S/W Requirements: [.NET](#), [Java](#), [Python \(2.7\)](#), [Perl](#), Virtualization Environment ([Virtual Box](#), [VMware player](#))

Tools of the trade:

OS:	Windows/Mac/Linux
Browsers:	Internet Explorer , Firefox , Chrome
Application Proxy/Scanner:	Burp Suite free , ZAP , IronWasp , SQLMap , SSLScan , Nikto , Netsparker Community
Hosting Environment:	XAMP , IIS
Miscellaneous:	Notepad++ , Greenshot , Browser Extensions

To start with the basics first we need a base OS , we will be using Windows 7 for ease of use and software compatibility.

**PenTesting distros such as [Kali Linux](#) and [Samurai WTF](#) are available to perform security assessments, but as they contain a huge list of tools and scripts, people starting in this domain find it difficult to directly go to them and learn. Once you are comfortable with this setup it would definitely be a good option to move to them. If desired a virtual environment setup can be used along with the base OS.*
