The scope of *Advances in SAR Remote Sensing of Oceans* is to demonstrate the types of information that can be obtained from SAR images of the oceans and the cutting edge methods needed for analysing SAR images. Written by leading experts in the field and divided into four sections, the book presents the basic principles of radar backscattering from the ocean surface, introduces the recent progresses in SAR remote sensing of dynamic coastal environment and management, discusses the state of the art methods to monitor parameters or phenomena related to the dynamic ocean environment and deals specifically with new techniques and findings of marine atmospheric boundary layer observations. *Advances in SAR Remote Sensing of Oceans* is a very comprehensive and up-to-date reference intended for use by graduate students, researchers, practitioners and R & D engineers working in the vibrant field of oceans interested to understand how SAR remote sensing can support oceanography research and applications.
