Silymarin Puzzle Peter Surai, Anton Surai, 2023-06-26 For the last 30 years polyphenols were in the centre of research work worldwide Silymarin an extract from a medicinal plant *Silybum marianum* also known as milk thistle has a special place in this group having been used in human medicine for the management of liver diseases since ancient times Accumulating scientific evidence indicates that silymarin is characterised by a wide range of protective pharmacological activities and this topic has received tremendous attention in recent years However until now there has been no single monograph addressing major questions related to silymarin chemistry biochemistry and practical applications The goal of this book is to provide up to date information about silymarin chemistry biochemistry and molecular mechanisms of protective actions of this phytochemical with a special emphasis to its vitagene and transcription factor modulating properties Silymarin applications in human diseases including hepatoprotection neuroprotection anti diabetic anti arthritis and other protective activities are reviewed Immunomodulating anti inflammatory anti toxic protective activities of silymarin are characterised in detail Practical applications of silymarin in poultry and animal industry with a special emphasis on its protective roles in gut health maintenance are also presented This book will be of practical importance to medical and pharmaceutical scientists including medical doctors pharmacists consultants etc as well as to poultry animal scientists poultry producers nutritionists and vets as well as to students of medical biological and agricultural backgrounds It can also be of interest for researchers in areas related to physiology biochemistry nutrition and veterinary medicine

Private Sector Innovations and Technological Growth in the MENA Region Ebrahimi, Maryam, 2018-11-09 Technological development is achievable only when a country has the ability to systematically design and introduce its own new technologies In spite of the variety of studies regarding technology management there is still a lack of studies concerning the principle concepts of technology management in the Middle Eastern North African MENA region s firms The generally low level of ICT diffusion in most of the region s countries widens the gap between MENA countries and the modern world Private Sector Innovations and Technological Growth in the MENA Region provides innovative insights into investments made for the digital transformation of major cities in the region that have the potential to become a significant driver for economic development and job creation Highlighting topics such as strategic planning risk analysis and customer loyalty this publication is designed for policymakers economists academicians researchers business professionals and students interested in the use of ICT integration for the advancement of the MENA region

Resources Use Efficiency in Agriculture Sandeep Kumar, Ram Swaroop Meena, Manoj Kumar Jhariya, 2020-09-18 Achieving zero hunger and food security is a top priority in the United Nations Development Goals UNDGs In an era characterized by high population growth and increasing pressure on agricultural systems efficiency in the use of natural resources has become central to sustainable agricultural practices Fundamentally speaking eco efficiency is about maximizing agricultural outputs in terms of quantity and quality using less land water nutrients energy labor or capital The

concept of eco efficiency involves both the ecological and economic aspects of sustainable agriculture It is therefore essential to understand the interaction of ecosystem constituents within the extensive agricultural landscape as well as farmers economic needs This book examines the latest eco efficient practices used in agro systems Drawing upon research and examples from around the world it offers an up to date overview together with insights into directly applicable approaches for poly cropping systems and landscape scale management to improve the stability of agricultural production systems helping achieve food security The book will be of interest to educators researchers climate change scientists capacity builders and policymakers alike It can also be used as additional reading material for undergraduate and graduate courses on agriculture forestry soil science and the environmental sciences

Liang,Hui Zheng,Chun Guang Li,2021-12-30 *Getting Healthy in Toxic Times* Jenny Goodman,2024-07-11 How can we protect ourselves from the pollution chemicals and toxins that pervade our environment Dr Jenny Goodman connects the health of our planet with our own well being addressing the questions that very few doctors ask We re all too aware of the traffic pollution in the air the chemicals in our water the toxins in the soil and therefore our food and the electromagnetic energy emanating from our gadgets If we can also understand how they affect our health not least in the worrying rises in asthma and allergies infertility obesity heart disease behavioral and neurological disorders as well as cancer then we can take positive steps to avoid them With the right information we can Safeguard ourselves with protective measures Minimize our interactions with pollutants Ensure our bodies have the right anti toxin nutrients Take collective action to fight for our health and that of the environment Backed by the latest scientific and medical research *Getting Healthy in Toxic Times* will empower you to look after your own health and that of the planet Let s put the good stuff in and take the bad stuff out

Unraveling the Exposome Sonia Dagnino,Anthony Macherone,2018-10-08 This volume presents a comprehensive overview of the science and application of the Exposome through seventeen chapters from leaders in the field At just over ten years since the term was coined by Christopher Wild in 2005 this is the first field defining volume to offer a holistic picture of the important and growing field of Exposomics The term Exposome describes the sum of all exposures not only chemical that an individual can receive over a lifetime from both exogenous sources environmental contaminants food lifestyle drugs air etc and endogenous sources metabolism oxidative stress lipid peroxidation chemicals synthesized by the microbiome etc The first section of this book contains chapters that discuss how the Exposome is defined and how the concept fits into the fields of public health and epidemiology The second section provides an overview of techniques and methods to measure the human Exposome The third section contains methods and applications for measuring the Exposome through external exposures Section four provides an overview on statistical and computational techniques including big data analysis for characterizing the Exposome Section five presents a global collection of case studies New EU criteria for endocrine disruptors Nordic

Council of Ministers,2018-08-30 Endocrine disruptors EDs are substances that adversely affect hormone function The effects by EDs are thought to depend on both dose and timing of exposure especially during foetal development The upcoming EU regulation on identification of EDs application biocides and pesticides will have an impact on all actors of the food chain The consequences of a ban of EDs in foods were discussed in a Nordic workshop Uppsala 29 30 Nov 2016 where risk assessors and managers from Nordic food authorities industry trade associations consumer organizations and researchers were represented It was recognized by all participants that a ban was particularly challenging for the production chain since there are few viable alternatives A harmonized EU legislation based on scientific risk assessment was preferred compared to national specific legislation as it treats all the actors equally The Handbook of Mites of Economic Plants Vincenzo

Vacante,2015-12-21 Mites pose a serious problem to plants worldwide attacking crops and spreading disease When mites damage crops of economic importance the impacts can be felt globally Mites are among the most diverse and successful of invertebrates with over 45 000 described species with many more thousands to be discovered They are responsible for a significant portion of the losses of crops for food fibre industry and other purposes and require expensive and often controversial pest control measures Understanding these mites is vital for entomologists pest researchers agronomists and food producers Knowledge of mite pests helps to inform control strategies and optimize the production of economic plants and the agrarian economy This encyclopedia provides a thorough coverage of the mites and the problems they cause to crops yet it is easily searchable organised by mite species and subdivided into helpful headings It takes a worldwide view of the issue of mites injurious to economic plants describing mites prevalent in different regions and discussing control methods appropriate in different environments This book provides an encyclopaedic reference to the major mites described by family in terms of their internal and external morphology bio ecology and family systematics Methods of mite collection and laboratory study is described as well as species diagnostic characteristics worldwide distribution host plants identification by the type of damage they cause and control strategies including chemical and biological intervention and integrated pest management measures Mites of the following families are included Eriophyoidea Tarsonemidae Tuckerellidae Tenuipalpidae Tetranychidae Acaridae Penthaleidae Mites of Economic Plants is an important resource for students of entomology and crop production and as a thorough reference guide for researchers and field workers involved with mites crop damage and food production

Crop Production and Global Environmental Issues Khalid Rehman Hakeem,2015-12-08 Meeting the world s food security challenge will require a multi national collaborative effort to integrate the best research from science engineering and socioeconomics so that technological advances can bring benefits where they are most needed The present book covers the effect of major environmental problems on crop production and how to cope with these issues for sustainable agriculture and improvements of crops The world s population is predicted to hit 9 6 Billion by 2050 up from today s total of nearly 7 3 Billion and with it food demand is predicted to increase substantially The post war second agricultural revolution

in developed countries and the green revolution in developing nations in the mid 1960s converted agricultural practices and elevated crop yields spectacularly but the outcome is levelling off and will not meet projected demand Simultaneously crop production is affected by many other factors including industrial pollution overuse of fertilizers and insecticides heavy metal and radiation stresses etc It has been noted that many pests are becoming resistant to insecticides Estimates vary but around 25% of crops can be lost to pests and diseases Climate change associated with agriculture is also a global issue Agriculture is a significant contributor to greenhouse gases and is estimated to account for 10 12% of total greenhouse gas GHG emissions Many of the issues highlighted are global problems and are addressed thoroughly in this work

Fungicide Resistance in Plant Pathogens Hideo Ishii, Derek William Hollomon, 2015-08-31 This volume offers a comprehensive coverage of the general principles and recent advances in fungicide resistance It describes the development mechanisms monitoring and management of resistance and covers the most important group of fungicides that have caused resistance on various crops An historical review of fungicide resistance over the past 40 years sets the scene for up to date basic information on mode of action as well as the genetics mechanisms and evolution of resistance Monitoring for resistance including the latest developments in molecular diagnostics moves readers into the practical aspects of resistance management which is dealt with through a series of case studies outlining fungicide use strategies on several key crops The chapters reflect the experience of authors internationally recognised for their significant contributions to fungicide resistance research The majority of crop diseases are caused by fungal pathogens and disease control relies heavily on chemically synthesized fungicides However modern fungicides often encounter the problem of resistance development in target pathogens Thus pathogen resistance to fungicides is an important factor that causes loss of yield and quality of crops It often threatens biosecurity through the decrease of fungicide efficacy in the fields To manage fungicide resistance successfully will require the promotion of integrated disease management involving not just chemical fungicides but also host plant resistance agronomic factors and reliable biological control agents where these are available Well referenced throughout the book offers a comprehensive account of resistance which will be useful as a source of material for lecturers and for both industrial and academic scientists involved in fungicide resistance research It is also a valuable sourcebook for students

Toxicity and Hazard of Agrochemicals Marcelo Larramendy, Sonia Soloneski, 2015-07-22 This edited book Toxicity and Hazard of Agrochemicals is intended to provide an overview of toxicology that examines the hazardous effects of common agrochemicals employed every day in our agricultural practices Furthermore it is hoped that the information in the present book will be of value to those directly engaged in the handling and use of agrochemicals and that this book will continue to meet the expectations and needs of all interested in the different aspects of human and environmental risk toxicities
