Using Neurophysiological Signals that Reflect Cognitive or Affective State Anne-Marie Brouwer, Thorsten O. Zander, Jan B. F. van Erp, 2015-07-27 What can we learn from spontaneously occurring brain and other physiological signals about an individual s cognitive and affective state and how can we make use of this information One line of research that is actively involved with this question is Passive Brain Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative output channel as opposed to more common human output channels like speech and moving the hands However brain signals possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones they can potentially provide continuous online information about an individual s cognitive and affective state without the need of

conscious or effortful communication The provided information could be used in a number of ways Examples include monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to errors to correct for a behavioral response While Passive BCIs make use of online neuro physiological responses and close the interaction cycle between a user and a computer system neuro physiological responses can also be used in an offline fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as indicators of mental effort for optimizing information systems The described field of applied neuro physiology can strongly benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we aimed to publish studies of the highest scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved Connected to the Research Topic was a workshop held on June 6 during the Fifth International Brain Computer Interface Meeting June 3 7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic [Advances in Computer Science and Information Technology](#) Tai-hoon Kim, Hojjat Adeli, 2010-06-20 Advanced Science and Technology Advanced Communication and Networking Information Security and Assurance Ubiquitous Computing and Multimedia Applications are conferences that attract many academic and industry professionals The goal of these co located conferences is to bring together researchers from academia and industry as well as practitioners to share ideas problems and solutions relating to the multifaceted aspects of advanced science and technology advanced communication and networking information security and assurance ubiquitous computing and multimedia applications This co located event included the following conferences AST 2010 The second International Conference on Advanced Science and Technology ACN 2010 The second International Conference on Advanced Communication and Networking ISA 2010 The 4th International Conference on Information Security and Assurance and UCMA 2010 The 2010 International Conference on Ubiquitous Computing and Multimedia Applications We would like to express our gratitude to all of the authors of submitted papers and to all attendees for their contributions and participation We believe in the need for continuing this undertaking in the future We acknowledge the great effort of all the Chairs and the members of advisory boards and Program Committees of the above listed events who selected 15% of over 1
