 Moshe Haviv, 2025-06-20 The text is divided into three main parts unconstrained optimization constrained optimization and
 linear programming The first part addresses unconstrained optimization in single variable and multivariable functions
 introducing key algorithms such as steepest descent Newton and quasi Newton methods The second part focuses on
 constrained optimization starting with linear equality constraints and extending to more general cases including inequality
 constraints It details optimality conditions sensitivity analysis and relevant algorithms for solving these problems The third
 part covers linear programming presenting the formulation of LP problems the simplex algorithm and sensitivity analysis
 Throughout the text provides numerous applications to data science such as linear regression maximum likelihood estimation
 expectation maximization algorithms support vector machines and linear neural networks Excel 2010: The Missing
