Socionomics Mikko Ketovuori, 2024-03-28 Socionomics How Social Mood Shapes Society explores the main principles and applications of socionomic theory as elaborated by Robert Prechter Socionomic theory posits that an omnipresent social mood shifting constantly in a wave form through all aspects of society is responsible for the aggregate tenor and character of all social economic and cultural trends from fluctuations in the stock market to the popularity of particular genres of music at a given time The social mood as an endogenous and collective force has its roots in the herding instinct often identified amongst crowds Individuals typically make rational decisions when acting alone and in the context of certainty but in groups and in context of uncertainty mood based mimetic behavior can affect all the participants As social mood often goes unnoticed people tend to give their collective feelings labels to rationalize them thus constituting public opinion Therefore whilst public opinion as presented in the media is usually seen as rational it is in fact based on the social mood context that often determines how people think feel and behave As the internet and social media have become ubiquitous in our daily lives these rationalizations are spreading faster and faster than ever before and creating a pseudo reality which can corrupt the collective perception of what is real and what is not This stimulating and thought provoking book will be of great interest to academics practitioners and policymakers with an interest in the

Technical Analysis And Financial Asset Forecasting: From Simple Tools To Advanced Techniques Raymond Hon-fu Chan, Alan Wing-keung Wong, Spike Tsz-ho Lee, 2014-08-19 Technical analysis is defined as the tracking and prediction of asset price movements using charts and graphs in combination with various mathematical and statistical methods. More precisely, it is the quantitative criteria used in predicting the relative strength of buying and selling forces within a market to determine what to buy, what to sell, and when to execute trades. This book introduces simple technical analysis tools like moving averages and Bollinger bands, and also advanced techniques such as wavelets and empirical mode decomposition. It first discusses some traditional tools in technical analysis such as trend, trend line, trend channel, Gann's Theory, moving averages, and Bollinger bands. It then introduces a recent indicator developed for the stock market and two recent techniques used in the technical analysis field: wavelets and the empirical mode decomposition in financial time series. The book also discusses the theory to test the performance of the indicators and introduces the MATLAB Financial Toolbox, some of the functions/codes of which are used in our numerical experiments.
