

## EQ

- Identifying, perceiving, and regulating emotions through five domains: self-awareness, self-regulation, empathy, and social skills (Goleman, 2020).
- Subject to environmental and social influences so can be actively trained and developed over time.
- No universally standardized test. Testing may involve ability tests and self-reported analyses of a person's own typical behavior (Cotruș, Stanciu and Bulboacă, 2012).
- Having the ability to interpret other people's emotions correctly or attending to emotional cues does not mean they have high IQ (Goleman, 2020).
- A pivotal role in general well-being, promoting a person's mental health and quality of relationships (David, 2014). Can lead to interpersonal success even if IQ is average.

## IQ

- Logical reasoning, cognitive functions, memory, word comprehension, maths skills, abstract and spatial thinking, mental agility.
- Considered a stable trait influenced by genetics.
- Assessed through standardized intelligence tests, which compare individuals' scores to the average performance of other participants in their age group.
- Having good analytical skills does not necessarily translate in the ability to understanding other people's emotions (Goleman, 2020).
- Can contribute to greater academic achievement and job performance.
