Nicolaus Copernicus Owen Gingerich, James MacLachlan, 2005-06-16 Born in Poland in 1473 Nicolaus Copernicus launched a quiet revolution No scientist so radically transformed our understanding of our place in the universe as this curious bishop s doctor and church official In his quest to discover a beautiful and coherent system to describe the motions of the planets Copernicus placed the sun in the center of the system and made the earth a planet traveling around the sun Today it is hard to imagine our solar system any other way but for his time Copernicus s idea was earthshaking In 1616 the church banned his book *Revolutions* because it contradicted the accepted notion that God placed Earth in the center of the universe Even though those who knew of his work considered his idea dangerous *Revolutions* remained of interest only to other scientists for many years It took almost two hundred years for his concept of a sun centered system to reach the general public None the less what Copernicus set out in his remarkable text truly revolutionized science For this Copernicus a quiet doctor who made a tremendous leap of imagination is considered the father of the Scientific Revolution Oxford Portraits in Science is an on going series of scientific biographies for young adults Written by top scholars and writers each biography examines the personality of its subject as well as the thought process leading to his or her discoveries These illustrated biographies combine accessible technical information with compelling personal stories to portray the scientists whose work has shaped our understanding of the natural world
