### **The Complete Guide To Cardiac CT (PB) Simeon**

Abramson, 2011-12-07. Acquire a thorough understanding of cardiac imaging. A Doody's Core Title for 2019. I believe radiologists, cardiologists, and clinicians as well as trainees will find *The Complete Guide to Cardiac CT* to be an indispensable tool for learning the subject matter. It is practical in approach but is solidly grounded in evidence-based medicine with a comprehensive review of the literature and timely references. The textbook provides an ideal resource for the cardiac imager and serves as an exceptional reference tool for understanding the anatomy and disease processes of the heart and coronary circulatory systems. Theresa C. McLoud, MD, Dept of Radiology, Massachusetts General Hospital and Professor of Radiology, Harvard Medical School, from the foreword.

Based on the popular review courses of educator and radiologist Dr. Simeon Abramson, *The Complete Guide to Cardiac CT* is a timely hands-on learning tool, one that will help you master every important aspect of cardiac CT from acquisition to interpretation. This unique guide translates complex concepts and topics into understandable relevant subject matter and includes contributions from international leaders in cardiac CT. Designed for the practical day-to-day application of cardiac CT, the text also serves as a comprehensive visual resource, more than 1000 laser-precise images and illustrations, all of which reflect the latest clinical acumen and cardiac imaging technology.

### **Landmarking and Segmentation of 3D CT Images** Shantanu Banik, Rangaraj Rangayyan, Graham Boag, 2022-06-01

Segmentation and landmarking of computed tomographic (CT) images of pediatric patients are important and useful in computer-aided diagnosis (CAD), treatment planning, and objective analysis of normal as well as pathological regions. Identification and segmentation of organs and tissues in the presence of tumors are difficult. Automatic segmentation

of the primary tumor mass in neuroblastoma could facilitate reproducible and objective analysis of the tumor's tissue composition shape and size. However, due to the heterogeneous tissue composition of the neuroblastic tumor ranging from low attenuation necrosis to high attenuation calcification, segmentation of the tumor mass is a challenging problem. In this context, methods are described in this book for identification and segmentation of several abdominal and thoracic landmarks to assist in the segmentation of neuroblastic tumors in pediatric CT images. Methods to identify and segment automatically the peripheral artifacts and tissues, the rib structure, the vertebral column, the spinal canal, the diaphragm, and the pelvic surface are described. Techniques are also presented to evaluate quantitatively the results of segmentation of the vertebral column, the spinal canal, the diaphragm, and the pelvic girdle by comparing with the results of independent manual segmentation performed by a radiologist. The use of the landmarks and removal of several tissues and organs are shown to assist in limiting the scope of the tumor segmentation process to the abdomen to lead to the reduction of the false positive error and to improve the result of segmentation of neuroblastic tumors.
