The front panel key performs the following functions in addition to self-tests:

Reset - Press the key until lights flash in sequence. This action clears all data, fonts, and macros from memory and resets the printer to a default condition.

Wake Up - Press the key for two seconds to turn the printer on if the intelligent switch has turned the printer off.

Continue - Press the key for two seconds to clear a recoverable error.

Self-tests

Single Page Test

Press the key for two seconds to print a self-test page.

Continuous Test

Press and hold the key for five seconds while plugging in the power cord, then release the key when only the Data light is on. Press the key to stop printing.

Engine Test

To bypass the formatter and test the print engine only, press the engine test button on the left side of the printer below and behind the parallel interface connector. A page of vertical lines will be printed.

Printer Configuration

The LaserJet 4L/4ML configuration and functions are controlled from the host system through the Windows - HP Explorer Remote Control Panel. The printer has no NVRAM for configuration storage. If the printer loses power, any configuration or downloaded fonts will be lost.

Common Problems and Fixes

Print Quality

Print quality problems are generally associated with the toner cartridge. Try removing and shaking the cartridge, and then reinstall it. If this does not resolve the problem, replace the cartridge with a known good one. If problems persist, run a test print and stop the printing process while the paper is under the drum in the cartridge. Check to see if the drum is imaged correctly. If the drum is imaged correctly, then the problem is in the transfer process. If the drum is not imaged correctly, the problem is in the image process.

Communication

Communication problems are often described as "no print", "garbage print", or incorrect print positioning. Communication problems are generally caused by incorrect configurations, bad interface cables, or a bad port on the host or printer.

Critical Adjustments

Loading Edge Adjustment

Run a print engine test. Measure the distance from the leading edge of the paper to the top of the printed image. This distance should be 1.5 to 2.5mm. If it is out of tolerance, remove the paper cassette and locate VR301. Adjust VR301 clockwise to decrease or counterclockwise to increase the distance.

Beam-to-Drum Mirror Adjustment (Skew)

Run a test print. Check the top edge of the printed line to ensure it is parallel with the leading edge of the paper. The difference between the left and right side should be less than 1.5mm. On the right side of the beam-to-drum mirror, loosen the adjustment set screw, noting the present position on the adjustment scale. Move the mirror toward the front of the printer to move the right side of the printed image up. Move the mirror toward the rear of the printer to move the left side of the image up. Continue to test and adjust the printer until the desired results are attained.

Cover Removal

Memory Door / IO Door

Open the I/O door on the left side of the printer and it will slide out of its retaining slots. Pull the small handle on the memory module and remove it. The memory door, also on the left side, opens in the same manner.
