The Family Tree Historical Newspapers Guide James M. Beidler, 2018-03-20 There are more historical newspaper resources than you think and they're easier to access than you know. When researched properly, no other type of record can beat historical newspapers in taking the pulse of their times and places, recording not just the names but also information important to the community. This comprehensive how-to guide will show you how to harvest the social media of centuries past to learn about your ancestors and the times and places they lived in. With step-by-step examples, case studies, templates, worksheets, and screenshots, this book shows you what you can find in online and offline historical newspapers, from city dailies to weekly community papers to foreign language gazetteers. The Family Tree Historical Newspapers Guide features tips and techniques for finding crucial genealogy records in newspapers, such as birth announcements, obituaries, and even news reports. Step-by-step guides for using popular online newspaper databases such as GenealogyBank and Newspapers.com. Case studies that will put information found in newspapers to use. *Natural Language Processing for Historical Texts* Michael Piotrowski, 2022-05-31 More and more historical texts are becoming available in digital form. Digitization of paper documents is motivated by the aim of preserving cultural heritage and making it more accessible both to laypeople and scholars. As digital images cannot be searched for text, digitization projects increasingly strive to create digital text which can be searched and otherwise automatically processed in addition to facsimiles. Indeed, the emerging field of digital humanities heavily relies on the availability of digital text for its studies. Together with the increasing availability of historical texts in digital form, there is a growing interest in applying natural language processing (NLP) methods and tools to historical texts. However, the specific linguistic properties of historical texts, the lack of standardized orthography in particular, pose special challenges for NLP. This book aims to give an introduction to NLP for historical texts and an overview of the state of the art in this field. The book starts with an overview of methods for the acquisition of historical texts, scanning and OCR, discusses text encoding and annotation schemes, and presents examples of corpora of historical texts in a variety of languages. The book then discusses specific methods such as creating part-of-speech taggers for historical languages or handling spelling variation. A final chapter analyzes the relationship between NLP and the digital humanities. Certain recently emerging textual genres, such as SMS, social media, and chat messages or newsgroup and forum postings, share a number of properties with historical texts, for example, nonstandard orthography and grammar and profuse use of abbreviations. The methods and techniques required for the effective processing of historical texts are thus also of interest for research in other domains.
