Science in the Schools Shawn M. Glynn,Reinders Duit,2012-10-12 Science and the technology derived from it is having a dramatic impact on the quality of our personal lives and the environment around us Science will have an even greater impact on the lives of our students The lives of scientifically literate students will be enriched by their understanding appreciation and enjoyment of the natural world To prosper in the near future all students must become scientifically literate and embrace the notion of life long learning in science Without scientific literacy it will become impossible for students to make informed decisions about the interrelated educational scientific and social issues that will confront them in the future Intended for science teachers teacher educators researchers and administrators this volume is concerned with the innovative research that is reforming how science is learned in schools The chapters provide overviews of current research and illustrate how the findings of this research are being applied in schools This research based knowledge is essential for effective science instruction The contributors are leading authorities in science education and their chapters draw clear connections among research theory and classroom practice They provide excellent examples from science classes in which their research has reformed practice This book will help educators develop the scientific literacy of students It bridges the gap between cutting edge research and classroom practice to provide educators with the knowledge they need to foster students scientific literacy

Active Learning in College Science Joel J. Mintzes,Emily M. Walter,2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events

Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years. In this view, learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base. For most students, that knowledge base is riddled with a host of naïve notions, misconceptions, and alternative conceptions they have acquired throughout their lives. To a considerable extent, the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view, to assist as students restructure and reconcile their newly acquired knowledge, and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances. Clearly, this prescription demands far more than most college and university scientists have been prepared for. **Explore Science (2e)** Matthew Cole, 2008-11-30

Proceedings of the Regional Conference on Science, Technology and Social Sciences (RCSTSS 2016) Mohd Yusri Mohamad Noor, Badli Esham Ahmad, Mohd Rozaidi Ismail, Hasnizawati Hashim, Mohd Amli Abdullah Baharum, 2018-07-20. This book features papers addressing a broad range of topics including psychology, religious studies, natural heritage, accounting, business, communication, education, and sustainable development. It serves as a platform for disseminating research findings by academicians of local, regional, and global prominence and acts as a catalyst to inspire positive innovations in the development of the region. It is also a significant point of reference for academicians and students. This collection of selected social sciences papers is based on the theme Soaring Towards Research Excellence presented at the Regional Conference of Sciences, Technology, and Social Sciences RCSTSS 2016, organised bi-annually by Universiti Teknologi MARA Cawangan Pahang, Malaysia. **Foundations of Earth Science** Frederick K. Lutgens, Edward J. Tarbuck, 2002. The truth of the serial murders in Hinamizawa is revealed at last in the final arc of the bestselling series. When her parents are killed in a terrible train accident, a young Miyo Takano is sent to live at an orphanage deep in the mountains. Little does she know that her parents' deaths are just the beginning of her hell: the institution is run by a group of greedy, cruel men who care nothing for the grief-stricken girl. Subjected to abuses beyond imagining, Miyo and her roommates plan to escape despite rumors of the terrible punishments that befell past runaways. Multimedia Learning Richard E. Mayer, 2020-07-09. This book examines how people learn from words and graphics and provides 15 evidence-based principles for designing multimedia instruction. Concept-Based Inquiry in Action Carla Marschall, Rachel French, 2018-05-30. Create a thinking classroom that helps students move from the factual to the conceptual. Concept-Based Inquiry is a framework for inquiry that promotes deep understanding. The key is using guiding questions to help students inquire into concepts and the relationships between them. Concept-Based Inquiry in Action provides teachers with the tools and resources necessary to organize and focus student learning around concepts and conceptual relationships that support the transfer of understanding. Step by step, the authors lead both new and experienced educators to implement teaching strategies that support the realization of inquiry-based learning for understanding in any K-12 classroom.
