Spellman, 1997-01-15 FROM THE PREFACE The processes used to remove water from biosolids and change their form from a liquid to a damp solid are critical to the operation of other downstream processes in wastewater treatment An ideal dewatering operation would capture all of the biosolids solids at minimum cost and the resultant dry biosolids solids or cake would be capable of being handled without causing unnecessary problems Process reliability ease of operation and compatibility with the treatment plant environment are also optimum This text is designed to provide a detailed look at several dewatering options It must be pointed out however that this text takes a strong biased view toward centrifugation as the dewatering process that

is most reliable maintenance free cost effective and capable of producing the highest quality end product when compared to the other options in a holistic manner Therefore the underlying theme of this text is wrapped around the premise that it is better to centrifuge it Having said this it must also be pointed out that all major biosolids dewatering processes are discussed in this text in detail Several examples of actual operating systems are presented and preventive maintenance and cost considerations are presented and discussed In recent years there has been a tendency in some technical texts like this one to focus on the theoretical and laboratory analyses of dewatering operations While such research and documented findings can lead to improved understanding of the scientific and engineering concepts associated with dewatering biosolids this text is presented in such a fashion so as to be user friendly It is an operator s text that can also afford the decision maker the opportunity to make informed choices about selecting a dewatering system for his her plant use Dewatering Biosolids will be of interest to people in all aspects of wastewater plant operation Useful as a handbook for operators this plain language text is also of importance to anyone considering altering or adapting their wastewater operating system
