food by fishes is an area of study that is of great importance to the applied sciences of fisheries and aquaculture for a number of reasons. For example, a thorough knowledge of factors influencing the ingestion of feed can lead to successful manipulation of the rearing environment of cultured fishes, thereby ensuring improved growth performance and feed utilisation and decreasing the amount of waste and consequent pollution per unit of fish produced. This important book, which has arisen out of a European Union COST programme, illustrates how insights into the biological and environmental factors that underlie the feeding responses of fish may be used to address practical issues of feed management. *Food Intake in Fish* contains carefully edited contributions from internationally recognised scientists, providing a book that is an invaluable tool and reference to all those involved in aquaculture, especially those working in the aquaculture feed industry and scientific personnel in commercial and research aquaculture facilities. This book should also find a place on the shelves of fish biologists and physiologists and as a reference in libraries of universities, research establishments and aquaculture equipment companies.

Rhythms in Fishes M.A. Ali, 2012-12-06. Tush my good lord, this superficial tale is but a preface of her worthy praise. King Henry the Sixth, Part I, Act V, Sc 5. This volume is the direct result of a NATO Advanced Study Institute (ASI) of the same title held at Bishop's University, Lennoxville, Quebec, Canada, in August 1991. All the major presentations had been commissioned so to speak during the organisational phase. This was done with the view of not only having a structured ASI which is expected to be a high level tutorial activity but also the ensuing volume. As will be indicated in the general introduction, there have been a couple of meetings and publications dealing with rhythms in fishes in the past twenty years. However, as in other disciplines, there has been substantial progress in this field also. Further, I wished to cover almost all aspects and come out

with a volume which will be as complete as possible. Of course this failed to materialise. In spite of starting the arrangements two years before the event several lecturers were not able to attend due to a number of reasons. Some could be replaced while others could not. Taking into account their individual specialties I asked about twenty active workers in the field to provide provoking overviews not simply reviews of their own work. Also this being a NATO *Delivering the Best Start* Carolyn Rankin, Avril Brock, 2009. The Early Years Foundation Stage (EYFS) is now statutory in the UK for children from birth to five years and other countries are experiencing similar developments. Early years librarians, teachers, nursery nurses, playgroup leaders and childminders all require knowledge of how to promote and encourage communication language and literary skills. Parental reading with young children is clearly vitally important and libraries are uniquely placed to support the development of literacy skills in pre-school children. This book provides an understanding of how children develop such skills through enjoyable and meaningful learning experiences and is a pioneering practical guide for library and information professionals involved in planning and delivering services in early years libraries. Drawing on the authors' underpinning contemporary research and examples from current best practice it will equip practitioners with a broad range of knowledge and ideas. Key areas covered include: taking them to the library; the role of the early years professional; people and partnerships working across interdisciplinary boundaries; and how to involve parents and carers; buildings design and space; the children's libraries of the future; resources for early years libraries; books, toys and other delights; reaching your audience; the librarian's role; planning and organizing projects and reading sessions. User friendly and accessible each chapter is clearly structured and sets out the key issues for practitioners' scenarios offering insights into these and practical ideas and resources for service provision. The book also includes case studies of successful pre-school library initiatives in a variety of global settings; useful information about relevant organizations and links to helpful websites. This valuable text is essential reading for all library and information professionals working with young children whether those with responsibility for the strategic planning of services or those involved in delivering them at community level. Readership: Essential for students of library and information studies or childhood studies and practitioners undertaking NVQ qualifications it also provides a sound background in early years literacy and provision for a range of local authority practitioners such as nursery teachers and Children's Centre managers.
