and Positioning Chen Gong,2019-11-04 In recent years wireless communications have significantly evolved due to the advanced technology of smartphones portable devices and the rapid growth of Internet of Things e Health and intelligent transportation systems Moreover there is anare increasing need fors of emerging intelligent services like positioning and sensing in athe future intelligence society Recent years have witnessed the growing research interests and activities in the

communication and intelligent services in the optical wireless spectrum as a complementary technology to more established radio frequency RF based systems to overcome the spectrum sparsity and increase data rates in crowded locations due to the limited transmission range and interference. The OWC technology offers advantages such as free license, wide bandwidth, inherent security, no RF electromagnetic interference, and immunity to electromagnetic interference. The attractive applications of the optical spectrum include ultra violet tactical communication, blue green underwater communication, visible light positioning, and vehicular communication sensing in intelligent transportation systems. The present issue, as named Visible Light Communication and Positioning, focuses on visible light communication and visible light positioning where four papers are on visible light communication and three papers are on visible light positioning. For visible light communication, the published works focus on the devices, the physical layer techniques, and the system work aspects. Besides VLC, visible light positioning works include fingerprint based indoor positioning system for multiple reflections, the impact of LED tilt on visible light positioning accuracy, and a mobile optoelectronic tracking system based on feedforward control.

Speech Processing in Embedded Systems Priyabrata Sinha, 2009-12-01. Speech processing has rapidly emerged as one of the most widespread and well understood application areas in the broader discipline of Digital Signal Processing. Besides the telecommunications applications that have hitherto been the largest users of speech processing algorithms, several non traditional embedded processor applications are enhancing their functionality and user interfaces by utilizing various aspects of speech processing. *Speech Processing in Embedded Systems* describes several areas of speech processing and the various algorithms and industry standards that address each of these areas. The topics covered include different types of Speech Compression, Echo Cancellation, Noise Suppression, Speech Recognition, and Speech Synthesis. In addition, this book explores various issues and considerations related to efficient implementation of these algorithms on real time embedded systems, including the role played by processor, CPU, and peripheral functionality.
