

1 Homotopy

In this course, the word “map” will always mean “continuous function”.

In topology, we study spaces up to “continuous deformation”. Famously, a coffee mug can be continuously deformed into a doughnut, and thus they are considered to be topologically the same. Now we also talk about maps between topological spaces. So a natural question is if it makes sense to talk about the continuous deformations of maps. It turns out it does, and the definition is sort-of the obvious one:

Definition (Homotopy). Let X, Y be topological spaces. A *homotopy* between $f_0, f_1 : X \rightarrow Y$ is a map $F : [0, 1] \times X \rightarrow Y$ such that $F(0, x) = f_0(x)$ and $F(1, x) = f_1(x)$. If such an F exists, we say f_0 is *homotopic* to f_1 , and write $f_0 \simeq f_1$.

This \simeq defines an equivalence relation on the set of maps from X to Y .

Just as concepts in topology are invariant under homeomorphisms, it turns out the theories we develop in algebraic topology are invariant under homotopies, i.e. homotopic maps “do the same thing”. This will be made more precise later.

Under this premise, if we view homotopic functions as “the same”, then we have to enlarge our notion of isomorphism to take this into account. To do so, we just write down the usual definition of isomorphism, but with equality replaced with homotopy.

Definition (Homotopy equivalence). A map $f : X \rightarrow Y$ is a *homotopy equivalence* if there is some $g : Y \rightarrow X$ such that $f \circ g \simeq \text{id}_Y$ and $g \circ f \simeq \text{id}_X$. We call g a *homotopy inverse* to f .

As always, homotopy equivalence is an equivalence relation. This relies on the following straightforward property of homotopy:

Proposition. If $f_0 \simeq f_1 : X \rightarrow Y$ and $g_0 \simeq g_1 : Y \rightarrow Z$, then $g_0 \circ f_0 \simeq g_1 \circ f_1 : X \rightarrow Z$.

$$\begin{array}{ccccc} X & \xrightarrow{f_0} & Y & \xrightarrow{g_0} & Z \\ & \searrow f_1 & & \searrow g_1 & \\ & & Y & \xrightarrow{g_1} & Z \end{array}$$

Example (Stupid example). If $f : X \rightarrow Y$ is a homeomorphism, then it is a homotopy equivalence — we take the actual inverse for the homotopy inverse, since equal functions are homotopic.

Example (Interesting example). Let $i : \{0\} \rightarrow \mathbb{R}^n$ be the inclusion map. To show this is a homotopy equivalence, we have to find a homotopy inverse. Fortunately, there is only one map $\mathbb{R}^n \rightarrow \{0\}$, namely the constant function 0. We call this $r : \mathbb{R}^n \rightarrow \{0\}$. The composition $r \circ i : \{0\} \rightarrow \{0\}$ is exactly the identity. So this is good.

In the other direction, the map $i \circ r : \mathbb{R}^n \rightarrow \mathbb{R}^n$ sends everything to 0. We need to produce a homotopy to the identity. We let $F : [0, 1] \times \mathbb{R}^n \rightarrow \mathbb{R}^n$ be

$$F(t, \mathbf{v}) = t\mathbf{v}.$$

We have $F(0, \mathbf{v}) = 0$ and $F(1, \mathbf{v}) = \mathbf{v}$. So this is indeed a homotopy from $i \circ r$ to $\text{id}_{\mathbb{R}^n}$.

This classic text appears here in a new edition for the first time in four decades The new edition with the aid of two new authors brings it up to date for a new generation of mathematicians and mathematics students Elements of Algebraic Topology provides the most concrete approach to the subject With coverage of homology and cohomology theory universal coefficient theorems Kunneth theorem duality in manifolds and applications to classical theorems of point set topology this book is perfect for communicating complex topics and the fun nature of algebraic topology for beginners This second edition retains the essential features of the original book Most of the notation and terminology are the same There are some useful additions There is a new introduction to homotopy theory A new Index of Notation is included Many new exercises are added Algebraic topology is a cornerstone of modern mathematics Every working mathematician should have at least an acquaintance with the subject This book which is based largely on the theory of triangulations provides such an introduction It should be accessible to a broad cross section of the profession both students and senior mathematicians Students should have some familiarity with general topology **Solutions Manual to Accompany Beginning Partial Differential**

Abstract Algebra An Interactive Approach Third Edition is a new concept in learning modern algebra Although all the expected topics are covered thoroughly and in the most popular order the text offers much flexibility Perhaps more significantly the book gives professors and students the option of including technology in their courses Each chapter in the textbook has a corresponding interactive Mathematica notebook and an interactive SageMath workbook that can be used in

either the classroom or outside the classroom Students will be able to visualize the important abstract concepts such as groups and rings by displaying multiplication tables homomorphisms by showing a line graph between two groups and permutations This in turn allows the students to learn these difficult concepts much more quickly and obtain a firmer grasp than with a traditional textbook Thus the colorful diagrams produced by Mathematica give added value to the students Teachers can run the Mathematica or SageMath notebooks in the classroom in order to have their students visualize the dynamics of groups and rings Students have the option of running the notebooks at home and experiment with different groups or rings Some of the exercises require technology but most are of the standard type with various difficulty levels The third edition is meant to be used in an undergraduate single semester course reducing the breadth of coverage size and cost of the previous editions Additional changes include Binary operators are now in an independent section The extended Euclidean algorithm is included Many more homework problems are added to some sections Mathematical induction is moved to Section 1.2 Despite the emphasis on additional software the text is not short on rigor All of the classical proofs are included although some of the harder proofs can be shortened by using technology

One Complex Variable from the Several Variable Point of View Peter V. Dvobush, Steven G. Krantz, 2025-06-30 Traditionally speaking those who study the function theory of one complex variable spend little or no time thinking about several complex variables Conversely experts in the function theory of several complex variables do not consider one complex variable One complex variable is the inspiration and testing ground for several complex variables and several complex variables are the natural generalization of one complex variable The authors thesis here is that these two subject areas have much in common These subject areas can gain a lot by learning to communicate with each other These two fields are logically connected and each can be used to explain and put the other into context This is the purpose of this book The point of view and the methodology of the two subject areas are quite different One complex variable is an aspect of traditional hard analysis Several complex variables are more like algebraic geometry and differential equations with some differential geometry thrown in The authors intend to create a marriage of the function theory of one complex variable and the function theory of several complex variables leading to a new and productive dialogue between the two disciplines The hope is for this book to foster and develop this miscegenation in a manner that leads to new collaborations and developments There is much fertile ground here and this book aims to breathe new life into it
