*Aircraft Accident Report*, 197? **Air Crash Investigations: The Crash of Swissair Flight 111** Hans Griffioen, 2009-08-01 On 2 September 1998 Swissair Flight SR 111 departed New York on a scheduled flight to Geneva Switzerland with 215 passengers and 14 crew members on board About 53 minutes after departure the flight crew smelled an abnormal odour in the cockpit They decided to divert to the Halifax International Airport They were unaware that a fire was spreading above the ceiling in the front area of the aircraft They would never make it to Halifax 20 minutes after the first detection of smoke in the cabin the aircraft crashed in the North Atlantic near Peggy s Cove Nova Scotia Canada There were no survivors 229 people died in the incident The Limits of Expertise R. Key Dismukes, Benjamin A. Berman, Loukia Loukopoulos, 2017-03-02 Why would highly skilled well trained pilots make errors that lead to accidents when they had safely completed many thousands of previous flights The majority of all aviation accidents are attributed primarily to human error but this is often misinterpreted as evidence of lack of skill vigilance or conscientiousness of the pilots The Limits of Expertise is a fresh look at the causes of pilot error and aviation accidents arguing that accidents can be understood only in the context of how the overall aviation system operates The authors analyzed in great depth the 19 major U S airline accidents from 1991 2000 in which the National Transportation Safety Board NTSB found crew error to be a causal factor Each accident is reviewed in a separate chapter that examines events and crew actions and explores the cognitive processes in play at each step The approach is guided by extensive evidence from cognitive psychology that human skill and error are opposite sides of the same coin The book examines the ways in which competing task demands ambiguity and organizational pressures interact with cognitive processes to make all experts vulnerable to characteristic forms of error The final chapter identifies themes cutting across the accidents discusses the role of chance criticizes simplistic concepts of causality of accidents and suggests ways to reduce vulnerability to these catastrophes The authors complementary experience allowed a unique approach to the study accident investigation with the NTSB cognitive psychology research both in the lab and in the field enormous first hand experience of piloting and application of aviation psychology in both civil and military operations This combination allowed the authors to examine and explain the domain specific aspects of aviation operations and to extend advances in basic research in cognition to complex issues of human performance in the real world Although The Limits of Expertise is directed to aviation operations the implications are clear for understanding the decision processes skilled performance and errors of professionals in many domains including medicine **Federal Register**, 2013-04 *Flying Magazine*, 1991-11 Digital Avionics Handbook Cary R. **Automation and Human Performance** Raja Parasuraman, Mustapha Mouloua, 2018-01-29 There is perhaps no facet of modern society where the influence of computer automation has not been felt Flight management systems for pilots diagnostic and surgical aids for physicians navigational displays for drivers and decision aiding systems for air traffic controllers represent only a few of the numerous domains in which powerful new automation technologies have been introduced The benefits that have been reaped from this technological revolution have been many At the same time automation has not always worked as planned by designers and many problems have arisen from minor inefficiencies of operation to large scale catastrophic accidents Understanding how humans interact with automation is vital for the successful design of new automated systems that are both safe and efficient The influence of automation technology on human performance has often been investigated in a fragmentary isolated manner with investigators conducting disconnected studies in different domains There has been little contact between these endeavors although principles gleaned from one domain may have implications for another Also with a few exceptions the research has tended to be empirical and only theory driven In recent years however various groups of investigators have begun to examine human performance in automated systems in general and to develop theories of human interaction with automation technology This book presents the current theories and assesses the impact of automation on different aspects of human performance Both basic and applied research is presented to highlight the general principles of human computer interaction in several domains where automation technologies are widely implemented The major premise is that a broad based theory driven approach will have significant implications for the effective design of both current and future automation technologies This volume will be of considerable value to researchers in human *CIS Federal Register Index*, 1992-07

**Aviation Information Management** Barbara G. Kanki, 2017-03-02 Operational information management is at a crossroads as it sheds the remaining vestiges of its paper based processes and moves through the uncharted domain of electronic data processes The final outcome is not yet in full focus but real progress has been made in the transition to electronic documents providing the aviation industry with a clear direction This book looks at a combination of industry initiatives and airline successes that point to the next steps that operators can take as they transition to fully integrated information management systems Although the route has not been fully identified it is evident that a key to successful long term efficient information management is industry wide cooperation The chapters are authored by a range of experts in
