Greenhouse Effect: The process by which the Earth's atmosphere traps heat from the sun, warming the planet. This occurs because certain gases in the atmosphere, known as greenhouse gases, absorb and re-radiate heat. The greenhouse effect is essential for life on Earth, as it keeps the planet warm enough for water to exist in liquid form. However, human activities, such as burning fossil fuels, have increased the concentration of greenhouse gases in the atmosphere, leading to global warming and climate change.
