

Adjusting Image Contrast (Curves Tool)

The Curves tool provides a good way to adjust (pull) image contrast. It allows for increased contrast in localized image areas (e.g., the midtones). Increased contrast in the midtones flattens the highlights and shadows resulting in a global increase in image contrast.

In the Curves dialog, place a point near the shadow end of the curve and drag it down to decrease contrast in the shadows. Then place a point near the highlight end of the curve and drag it up. Lastly place a point near the midtone and adjust it for good contrast. This produces a typical S-Curve.

An inverse S-Curve produces a flattening of overall image contrast.

More on Curves in Chapter 2, *Colorspace*. More on editing contrast in Chapter 4, *Advanced Options*.
