environmental science it also highlights major environmental events and developments over the past year and presents the  
most recent data and indicator trends The ocean has become a global repository for much of the waste we produce Scientists  
are concerned that plastic debris in the ocean can transport toxic substances which may end up in the food chain causing  
potential harm to ecosystems and human health The Year Book also explores the wider implications of the use of phosphorus  
in food production Phosphorus is an essential nutrient whose supply is limited Since demand for fertilizer in agriculture  
rocketed in the 20th century large amounts of phosphorus are flowing into the environment New perspectives are also  
emerging on how biodiversity conservation can be integrated in forest management Forests are receiving increasing  
attention not least because of their role in climate change mitigation Halting loss of forest biodiversity is essential if forests  
are to adapt to mounting pressures including climate change and pest outbreaks The Year Book s overview of events and  
developments during 2010 shows how cutting edge science reveals new opportunities to mitigate climate change while  
improving air quality Stimulated by technological innovation and green investments renewable energy supply is growing  
rapidly This and other developments are summarized in key environmental indicators that present the latest data and trends

Science fiction literature and film are an underappreciated source for the teaching of history. Finding material that can excite a student's curiosity can be a key towards greater student engagement, especially among students who are taking history as a requirement rather than from interest. The discovery that they can read or watch science fiction as part of their classwork often comes as a pleasant surprise. Beyond its popularity, however, utilizing science fiction for class assignments has certain pedagogical advantages: it introduces students to new vistas in historical thought, helps them learn how literature and film can be applied as a primary source, and can encourage participation in projects that are enjoyable. Each chapter provides case studies focusing on a different subject in the modern history curriculum and, in addition to providing an analysis of specific texts and/or cinematic sources, gives suggestions on assignments for the students.
