PRACTICE TEST Chapter 2: 1-D Kinematics

Question 1 [Source APCDP164]

A cart is constrained to move along a straight line. A varying net force along the direction of motion is exerted on the cart. The cart's velocity v as a function of time t is shown in the graph above. The five labeled points divide the graph into four sections.

- a. Which of the following correctly ranks the magnitude of the average acceleration of the cart during the four sections of the graph?

- (A) $a_{CD} > a_{AB} > a_{BC} > a_{DE}$
 (B) $a_{BC} > a_{AB} > a_{CD} > a_{DE}$
 (C) $a_{AB} > a_{BC} > a_{DE} > a_{CD}$
 (D) $a_{CD} > a_{AB} > a_{DE} > a_{BC}$

$a_{BC} = 0$

- b. For which segment does the cart move the greatest distance?

- (A) AB
 (B) BC
 (C) CD
 (D) DE

$\Delta x_{BC} = 8 \frac{m}{s} (2.0) = 16 \frac{m}{s}$

$\Delta x_{AB} = \frac{1}{2} (0 + 8) (0.5) = 2$

$\Delta x = v_{av} \Delta t$

For 0-1.5: $\Delta x > 5$

For 1-2.0: $\Delta x > (7) 2 = 14$

So $\Delta x > 19$

APPROXIMATE!

the principle cause of incidents and accidents in all technology industries hence it is evident that an understanding of the
interaction between humans and technology is crucial to the effective management of risk Despite this no tested model that
explicitly and quantitatively includes the human element in risk prediction is currently available Managing Risk the Human
Element combines descriptive and explanatory text with theoretical and mathematical analysis offering important new
concepts that can be used to improve the management of risk trend analysis and prediction and hence affect the accident
rate in technological industries It uses examples of major accidents to identify common causal factors or echoes and argues
that the use of specific experience parameters for each particular industry is vital to achieving a minimum error rate as
defined by mathematical prediction New ideas for the perception calculation and prediction of risk are introduced and safety
management is covered in depth including for rare events and unknown outcomes Discusses applications to multiple
industries including nuclear aviation medical shipping chemical industrial railway offshore oil and gas Shows consistency
between learning for large systems and technologies with the psychological models of learning from error correction at the
personal level Offers the expertise of key leading industry figures involved in safety work in the civil aviation and nuclear
engineering industries Incorporates numerous fascinating case studies of key technological accidents Managing Risk the
Human Element is an essential read for professional safety experts human reliability experts and engineers in all
technological industries as well as risk analysts corporate managers and statistical analysts It is also of interest to professors
researchers and postgraduate students of reliability and safety engineering and to experts in human performance
congratulations on what appears to be at a high level of review a significant contribution to the literature I have found much
to be admired in your research Mr Joseph Fragola Vice President of Valador Inc The book is not only technically informative
but also attractive to all concerned readers and easy to be comprehended at various level of educational background It is
truly an excellent book ever written for the safety risk managers and analysis professionals in the engineering community
especially in the high reliability organizations Dr Feng Hsu Head of Risk Assessment and Management NASA Goddard Space

success in capturing a major trend in them I should add that I find all this quite inspiring The idea that you need to find the
right measure of accumulated experience and not just routinely used calendar time makes so much sense that it comes as a

Escape from Shadow Physics Adam Kay, 2024-06-18

The artfully written splendid history of classical and quantum physics Science that rightfully highlights the limitations of current physics Wall Street Journal and argues for a revolutionary new understanding of quantum mechanics

The received wisdom in quantum physics is that at the deepest levels of reality there are no actual causes for atomic events This idea led to the outlandish belief that quantum objects indeed reality itself aren't real unless shaped by human measurement Einstein mocked this idea asking whether his bed spread out across his room unless he looked at it And yet it remains one of the most influential ideas in science and our culture

In *Escape from Shadow Physics* Adam Forrest Kay takes up Einstein's torch reality isn't mysterious or dependent on human measurement but predictable and independent of us

At the heart of his argument is groundbreaking research with little drops of oil These droplets behave as particles do in the long overlooked quantum theory of pilot waves crucially they showcase quantum behavior while being described by classical physics And that classical quantum interface points to a true understanding of quantum mechanics and a reasonable universe

A bold and essential reset of the field *Escape from Shadow Physics* describes the kind of true scientific revolution that comes along just once or less in a century
