

What Is Magnetic Induction?

- Magnetic induction, also known as electromagnetic induction, is the process where a changing magnetic field generates voltage within a conductor like a coil of wire
- Discovered by Michael Faraday, it forms the foundation for many electrical systems and devices, including generators, transformers, and inductors
- Faraday's Law states that the induced electromotive force (EMF) in a wire loop equals the negative rate of change of the magnetic flux
- Lenz's Law describes that the induced current flows in a direction opposing the change in magnetic flux
- Magnetic induction has numerous practical applications, from electric generators and transformers to wireless charging and metal detectors
