

E&M Unit 4 - Magnetism: Worksheet 1 Key

Part 1

For questions 1-4, draw in the needle of the compass (in large empty circle) showing the deflection that the needle will experience. North is at the top of the page. If there is no deflection write none.

Note: The symbol \odot represents a wire coming out of the paper and \otimes represents a wire going into the paper.

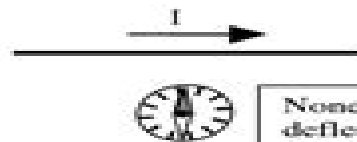

1.

2.

3.

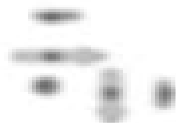

None, any deflection is downward.

4.

For questions 5-8, sketch vectors to represent the strength and direction of the magnetic field at the designated places due to the current in the wires.

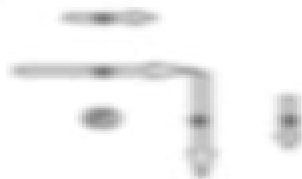

5.

6.

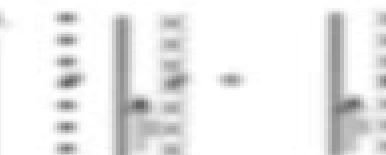

7.

The magnetic field is a field of force that surrounds a wire carrying an electric current. It is a vector field, meaning it has both magnitude and direction. The direction of the field is determined by the direction of the current. The magnitude of the field is proportional to the current and inversely proportional to the distance from the wire.

8.

There is a field around the wire. The field is a vector field, meaning it has both magnitude and direction. The direction of the field is determined by the direction of the current. The magnitude of the field is proportional to the current and inversely proportional to the distance from the wire.

Introduction to Frustrated Magnetism Claudine Lacroix, Philippe Mendels, Frédéric Mila, 2011-01-12. The field of highly frustrated magnetism has developed considerably and expanded over the last 15 years. Issuing from canonical geometric frustration of interactions, it now extends over other aspects with many degrees of freedom such as magneto-elastic couplings, orbital degrees of freedom, dilution effects, and electron doping. It is thus shown here that the concept of frustration impacts on many other fields in physics than magnetism. This book represents a state-of-the-art review aimed at a broad audience with tutorial chapters and more topical ones encompassing solid-state chemistry, experimental and theoretical physics.
