Strategies for Sustainable Cities Giuseppe Margani,2019-06-11 The principle of sustainability should be strictly connected with safety since both aim to conserve resources in the case of sustainability the resources are typically thought of as environmental while in the case of safety the resources are basically human In spite of this common ground discussions on sustainability usually give insufficient attention to safety In the last years the EU has made large investments to increase the energy efficiency of the existing building stock paving the way for a low carbon future however less effort has been made to enhance its seismic resilience Therefore the safety and consequently the sustainability of towns situated in earthquake prone countries remain inadequate In such countries energy renovation actions should be combined with seismic retrofitting However a number of barriers considerably limit the real possibility of extensively undertaking combined retrofit actions especially for multi owner housing and high rise buildings These barriers are of different kinds technical e g unfeasibility and

or ineffectiveness of conventional retrofit solutions financial e.g. high renovation costs insufficient incentives subsidies organizational e.g. occupants disruption and relocation renovation consensus by condominium ownerships and cultural social insufficient information and skills lack of adequate policy measures for promoting renovation actions This book aims to overcome these barriers and to bridge the gap between sustainability and safety so to conserve both human and environmental resources Proceedings of the 7th International Conference on Construction, Architecture and Technosphere Safety Andrey A. Radionov, Dmitrii V. Ulrikh, Svetlana S. Timofeeva, Vladimir N. Alekhin, Vadim R. Gasiyarov, 2024-03-04 This book highlights recent findings in civil and environmental engineering and urban planning and provides an overview of the state of the art in these fields mainly in Russia and Eastern Europe A broad range of topics and issues in modern engineering are discussed including construction buildings and structures advanced materials innovative technology methods and techniques in civil engineering heating gas supply water supply and sewerage foundation engineering BIM structural reliability durability and monitoring special and unique structures construction bridge tunnel road railway engineering design and construction of hydraulic structures concrete engineering urban regeneration and sustainable development urban transport system engineering structure safety and disaster prevention water resources engineering water and wastewater treatment recycling and reuse of wastewater etc The volume gathers selected papers from the 7th International Conference on Construction Architecture and Technosphere Safety ICCATS held in Sochi Russia in September 2023 The authors are experts in various fields of engineering and all papers have been carefully reviewed

Structural Analysis and Design to Prevent Disproportionate Collapse Feng Fu, 2016-04-27 Hard Guidance on Preventing Disproportionate Collapse Disproportionate collapse is a pressing issue in current design practice Numerous causes are possible especially forms of extreme loading such as blast fire earthquake or vehicle collisions But it is the mechanism and its prevention which are of especial interest and concern After the Wor Historical Earthquake-Resistant Timber Framing in the Mediterranean Area Helena Cruz, José Saporiti Machado, Alfredo Campos Costa, Paulo Xavier Candeias, Nicola Ruggieri, José Manuel Catarino, 2016-08-29 This book presents a selection of the best papers from the HEaRT 2015 conference held in Lisbon Portugal which provided a valuable forum for engineers and architects researchers and educators to exchange views and findings concerning the technological history construction features and seismic behavior of historical timber framed walls in the Mediterranean countries The topics covered are wide ranging and include historical aspects and examples of the use of timber framed construction systems in response to earthquakes such as the gaiola system in Portugal and the Bourbon system in southern Italy interpretation of the response of timber framed walls to seismic actions based on calculations and experimental tests assessment of the effectiveness of repair and strengthening techniques e.g. using aramid fiber wires or sheets and modelling analyses In addition on the basis of case studies a methodology is presented that is applicable to diagnosis strengthening and improvement of seismic performance and is compatible with modern

theoretical principles and conservation criteria It is hoped that by contributing to the knowledge of this construction technique the book will help to promote conservation of this important component of Europe s architectural heritage
