Mathematical Modeling in the Age of the Pandemic William P. Fox, 2021-06-09 One cannot watch or read about the news these days without hearing about the models for COVID 19 or the testing that must occur to approve vaccines or treatments for the disease The purpose of *Mathematical Modeling in the Age of a Pandemic* is to shed some light on the meaning and interpretations of many of the types of models that are or might be used in the presentation of analysis Understanding the concepts presented is essential in the entire modeling process of a pandemic From the virus itself and its infectious rates and deaths rates to explain the process for testing a vaccine or eventually a cure the author builds presents and shows model testing This book is an attempt based on available data to add some validity to the models developed and used showing how close to reality the models are to predicting results from previous pandemics such as the Spanish flu in 1918 and more recently the Hong Kong flu Then the author applies those same models to Italy New York City and the United States as a whole Modeling is a process It is essential to understand that there are many assumptions that go into the

modeling of each type of model The assumptions influence the interpretation of the results Regardless of the modeling approach the results generally indicate approximately the same results This book reveals how these interesting results are obtained Particle Physics at the Year of 250th Anniversary of Moscow University A.
