## Directions

Answer the following questions. Show work, including all known values. Be sure to include all steps and units throughout each solution.

All problems require that you show all work. Points will be taken off for not showing work.

## Problems

A pneumatic cylinder producing 2000 lbs of force produces a cylinder is connected to a pump on a cylinder. The pump is producing a flow rate of 100 gpm. The cylinder is 100 gpm.

1. Show all work and include all known and unknown values.

Answer:

2. What is the required area of the pneumatic cylinder?

| Formula           | Equation & Value                                                                                                                                             | Final Answer         |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| $A = \frac{F}{P}$ | $1000 \frac{\text{lb}}{\text{in}^2} = \frac{2000 \text{ lb}}{P} \Rightarrow P = \frac{2000 \text{ lb}}{1000 \frac{\text{lb}}{\text{in}^2}} = 2 \text{ in}^2$ | $A = 2 \text{ in}^2$ |

3. What is the required diameter of the pneumatic cylinder?

| Formula                                                  | Equation & Value                                                                                                                                                                                   | Final Answer          |
|----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| $A = \pi r^2$<br>or $A = \pi \left(\frac{D}{2}\right)^2$ | $2 \text{ in}^2 = \pi r^2 \Rightarrow r = \sqrt{\frac{2 \text{ in}^2}{\pi}} = 0.79 \text{ in}$<br>or $A = \pi \left(\frac{D}{2}\right)^2 \Rightarrow D = 2 \sqrt{\frac{A}{\pi}} = 1.58 \text{ in}$ | $D = 1.58 \text{ in}$ |

**Fluid Power Circuits and Controls** John S. Cundiff, Michael F. Kocher, 2019-12-05 Fluid Power Circuits and Controls Fundamentals and Applications Second Edition is designed for a first course in fluid power for undergraduate engineering students After an introduction to the design and function of components students apply what they ve learned and consider how the component operating characteristics interact with the rest of the circuit The Second Edition offers many new worked examples and additional exercises and problems in each chapter Half of these new problems involve the basic analysis of specific elements and the rest are design oriented emphasizing the analysis of system performance The envisioned course does not require a controls course as a prerequisite however it does lay a foundation for understanding the extraordinary productivity and accuracy that can be achieved when control engineers and fluid power engineers work as a team on a fluid power design problem A complete solutions manual is available for qualified adopting instructors **Fluid Mechanics and Fluid Power (Vol. 2)** Sumanjan Bhattacharyya, Ali Cemal Benim, 2023-05-20 This book presents the select proceedings of the 48th National Conference on Fluid Mechanics and Fluid Power FMFP 2021 held at BITS Pilani in December 2021 It covers the topics such as fluid mechanics measurement techniques in fluid flows computational fluid dynamics instability transition and turbulence fluid structure interaction multiphase flows micro and nanoscale transport bio fluid mechanics aerodynamics turbomachinery propulsion and power The book will be useful for researchers and professionals interested in the broad field of mechanics Proceedings of the 26th National Conference on Fluid Mechanics and Fluid Power B.
