

Flying Pig Lab

The flying pig does not fly in a horizontal circle, but in a conical pendulum. This complicates our process for taking measurements.

Procedures:

Part 1: radius of the circle

1) Push the pig at a tangent to the circle in which you want it to fly. You apply a FORCE at a TANGENT to produce the centripetal force.

2) Give the pig a few times around to settle into a consistent sort of orbit.

3) Fly the pig over a meter stick to measure the diameter of the circle. Be as precise as you can. Record this in the data table.

4) Time the pig around 10 times and record this. Do it 3 times and average it.

5) Turn off the pig.

Part 2: Period of the Pig

6) To calculate the speed of the pig, you need the period. Period is how long to go around once. Take the average time you just got and divide by 10. Record the Period.

Part 3: Velocity of the Pig

7) To get velocity, You need to know the circumference of the circle. Use the formula $2\pi r = C$ to calculate this. Record it.

8) Finally, you need to calculate the velocity. Use $\text{circumference}/\text{period}$. Record this.

Part 4: Centrifetal Acceleration of the Pig

9) Calculate the acceleration of the pig using $a = v^2/r$.

Part 5: Weighing the Pig, 2 ways

10) Hang the pig back up with a spring scale between it and the support. Be sure to zero the scale before you start. Measure the weight of the pig in Newtons and record it.

11) This is the hard part. Set the pig in motion, hanging from the spring scale. The device is going to oscillate. You need to get the approximate centripetal force with it. Be sure the pig is flying consistently before you attempt to take a reading. Record it.

Part 6: Mass of the Pig

12) Determine the mass of the pig using the hanging at right down/weight reading. $W/g = \text{mass}$.
