

Check It Out! Example 4

The frame is attached to the tripod at points A and B such that $AB = RS$ and $BR = SA$. So $ABRS$ is also a parallelogram. How does this ensure that the angle of the binoculars stays the same?

Since $ABRS$ is a parallelogram, it is always true that $\overline{AB} \parallel \overline{RS}$.

Since \overline{AB} stays vertical, \overline{RS} also remains vertical no matter how the frame is adjusted.

Therefore the viewing \angle never changes.
