What Are the Properties of Magnets?

Have you ever experimented with magnets? If so, you know that they can stick to each other and to some kinds of metal. You also know that magnets can stick to things without touching them directly. For example, a magnet sticks to a refrigerator door even with a piece of paper in between. They are not really sticky, so what makes things cling to them?

More than 2,000 years ago, the Greeks discovered a mineral that attracted things made of iron. They found it in a part of Turkey called Magnesia, so the Greeks called it *magnetite*. Today, we call any material that attracts iron or things made of iron a **magnet**. All magnets have certain properties. For example, all magnets have two poles. Magnets exert forces on each other. Last, all magnets are surrounded by magnetic fields. **E**

MAGNETIC POLES

More paper clips stick to the ends, or magnetic poles, of the magnet because the magnetic forces are strongest there.

Magnetic effects are not the same throughout the magnet. What happens when you put a bar magnet into a box of paper clips? Most of the clips stick to the ends of the magnet. The strongest magnetic forces occur near the ends of the bar magnet. Each end of the magnet is a magnetic pole. **Magnetic poles** are points on a magnet that have opposite magnetic qualities. **E**

STUDY TIP

Predict Before reading this section, predict whether each of the following statements is true or false:

- Every magnet has a north pole and a south pole.
- The magnetic pole near the Earth's South Pole is a north pole.

READING CHECK

1. List what are three properties of a magnet?

READING CHECK

2. Describe What are magnetic poles?
