Friedrich Pfeiffer, 2008-09-27 Mechanics as a fundamental science in Physics and in Engineering deals with interactions of forces resulting in motion and deformation of material bodies Similar to other sciences Mechanics serves in the world of Physics and in that of Engineering in a different way in spite of many and increasing inter dependencies Machines and mechanisms are for physicists tools for cognition and research for engineers they are the objectives of research according to a famous statement of the Frankfurt physicist and biologist Friedrich Dessauer Physicists apply machines to support their questions to Nature with the goal of new insights into our physical world Engineers apply physical knowledge to support the realization process of their ideas and their intuition Physics is an analytical Science searching for answers to questions concerning the world around us Engineering is a synthetic Science where the physical and mathematical fundamentals play the role of a kind of reinsurance with respect to a really functioning and efficiently operating machine Engineering is also an iterative Science resulting in typical long time evolutions of their products but also in terms of the relatively short time developments of improving an existing product or in developing a new one Every physical or mathematical Science has to face these properties by developing on their side new methods new practice proved algorithms up to new fundamentals adaptable to new technological developments This is as a matter of fact also true for the field of Mechanics

Dynamic Analysis of Non-Linear Structures by the Method of Statistical Quadraticization M.G. Donley, Pol Spanos, 2012-12-06 1 1 Introduction As offshore oil production moves into deeper water compliant structural systems are becoming increasingly important Examples of this type of structure are tension leg platforms TLP s guyed tower platforms compliant tower platforms and floating production systems The common feature of these systems which distinguishes them from conventional jacket platforms is that dynamic amplification is minimized by designing the surge and sway natural frequencies to be lower than the predominant frequencies of the wave spectrum Conventional jacket platforms on the other hand are designed to have high stiffness so that the natural frequencies are higher than the wave frequencies At deeper water depths however it becomes uneconomical to build a platform with high enough stiffness Thus the switch is made to the other side of the wave spectrum The low natural frequency of a compliant platform is achieved by designing systems which inherently have low stiffness Consequently the maximum horizontal excursions of these systems can be quite large The low natural frequency characteristic of compliant systems creates new analytical challenges for engineers This is because geometric stiffness and hydrodynamic force nonlinearities can cause significant resonance responses in the surge and sway modes even though the natural frequencies of these modes are outside the wave spectrum frequencies High frequency resonance responses in other modes such as the pitch mode of a TLP are also possible

Coupled Boundary

and Finite Element Methods for the Solution of the Dynamic Fluid-Structure Interaction Problem Siamak

Amini, Paul J. Harris, David T. Wilton, 2012-12-06 This text considers the problem of the dynamic fluid structure interaction between a finite elastic structure and the acoustic field in an unbounded fluid filled exterior domain The exterior acoustic field is modelled through a boundary integral equation over the structure surface However the classical boundary integral equation formulations of this problem either have no solutions or do not have unique solutions at certain characteristic frequencies which depend on the surface geometry and it is necessary to employ modified boundary integral equation formulations which are valid for all frequencies The particular approach adopted here involves an arbitrary coupling parameter and the effect that this parameter has on the stability and accuracy of the numerical method used to solve the integral equation is examined The boundary integral analysis of the exterior acoustic problem is coupled with a finite element analysis of the elastic structure in order to investigate the interaction between the dynamic behaviour of the structure and the associated acoustic field Recently there has been some controversy over whether or not the coupled problem also suffers from the non uniqueness problems associated with the classical integral equation formulations of the exterior acoustic problem This question is resolved by demonstrating that the solution to the coupled problem is not unique at the characteristic frequencies and that it is necessary to employ an integral equation formulation valid for all frequencies

Fundamentals of Vehicle Dynamics Thomas Gillespie, 2021-04-29 A world recognized expert in the science of vehicle dynamics Dr Thomas Gillespie has created an ideal reference book that has been used by engineers for 30 years ranging from an introduction to the subject at the university level to a common sight on the desks of engineers throughout the world As with the original printing Fundamentals of Vehicle Dynamics Revised Edition strives to find a middle ground by balancing the need to provide detailed conceptual explanations of the engineering principles involved in the dynamics of ground vehicles with equations and example problems that clearly and concisely demonstrate how to apply such principles A study of this book will ensure that the reader comes away with a solid foundation and is prepared to discuss the subject in detail Ideal as much for a first course in vehicle dynamics as it is a professional reference Fundamentals of Vehicle Dynamics Revised Edition maintains the tradition of the original by being easy to read and while receiving updates throughout in the form of modernized graphics and improved readability Inasmuch as the first edition proved to be so popular the Revised Edition intends to carry on that tradition for a new generation of engineers
