Johnson, 2015-07-22 The word

innovation is often used today regarding China as if the concept were new to the Eastern country. Most people know however that China was a juggernaut in creating new technologies and at one time was the innovation king of the world but that was at least seven centuries ago. Today the great oriental power is attempting once again to take the throne of innovation for its own. This desire to usurp the throne which had been diligently taken by the West during the Scientific Revolution has placed an almost unrealistic emphasis on innovation. In *Innovation in China: The Tail of the Dragon*, the author explores the issues and actors involved in making innovation the emphasis in China. He uses a simple systems model of innovation and various perceptual lenses. The lenses are aimed at the historical, economic, political, legal, educational, and cultural elements of an innovation based society. After reading the book, the reader will understand more about how innovation is happening in China and by whom. More importantly, the reader will begin a journey of learning more about where the country is going as it relentlessly continues its drive to create an innovation based society and to become once again in terms appropriate to its history, the Emperor of Innovation.

*Behavioral Science & Policy: Volume 2, Issue 1* Craig Fox, Sim B. Sitkin, 2016-11-22

The success of nearly all public and private sector policies hinges on the behavior of individuals, groups, and organizations. Today such behaviors are better understood than ever thanks to a growing body of practical behavioral science research. However, policymakers often are unaware of behavioral science findings that may help them craft and execute more effective and efficient policies. The pages of this new journal will become a meeting ground, a place where scientists and non-scientists can encounter clearly described behavioral research that can be put into action. By design, the scope of BSP is broad with topics spanning health care, financial decisionmaking, energy, and the environment, education and culture, justice and ethics, and workplace practices. Contributions will be made by researchers with expertise in psychology, sociology, law, behavioral economics, organization science, decision science, and marketing. The journal is a key offering of the Behavioral Science Policy Association in partnership with the Brookings Institution. The mission of BSPA is to foster dialog between social scientists, policymakers, and other practitioners in order to promote the application of rigorous empirical behavioral science in ways that serve the public interest. BSPA does not advance a particular agenda or political perspective. The first issue's contents follow:
