**Ecosystems: Oceans** Trevor Day, 2014-07-10 The oceans are teeming with life of all kinds Changing sea levels plate tectonics chemical cycling sedimentation and the atmosphere greatly impact these habitats The ocean's currents and sea level are tied closely to weather patterns and in turn to such issues as global warming and El Niño Oceans provides a complete overview of the ecosystem that exists in these bodies of water From the coastal wetlands to the deep ocean waters the geography geology chemistry and physics of oceans are thoroughly examined in this volume Today the impact that human use of ocean resources has on these habitats including habitat loss and overharvesting is in constant debate Oceans looks at these possible threats and concludes with a balanced look at the ways to manage the oceans as well as the future of this ecosystem

**Transboundary Environmental Governance** Simon Marsden, 2016-02-24 Effective protection of the marine and terrestrial environment increasingly requires cooperation between neighbouring States, international organizations, government entities and communities within States. This book analyses key aspects of transboundary environmental law and policy and their implementation in Asia, Australasia and Australian offshore territories and surrounding areas beyond national jurisdiction including Antarctica. It discusses the potential for implementing key transboundary environmental mechanisms such as the 1991 Convention on Environmental Impact Assessment in a Transboundary Context, Espoo Convention and its 1997 Protocol on Strategic Environmental Assessment, Kiev Protocol in Australia and Asia, drawing on experience from other regions and the potential application of these agreements to all UN member states. The book makes an innovative contribution to research in the area of transboundary environmental governance particularly as it applies to Asia, Australasia and international areas supplementing similar research which has predominantly focused on Europe and North America.
