An Introduction to Gravity Joel Franklin,2024-04-11 Einstein s theory of gravity can be difficult to introduce at the undergraduate level or for self study One way to ease its introduction is to construct intermediate theories between the previous successful theory of gravity Newton s and our modern theory Einstein s general relativity This textbook bridges the gap by merging Newtonian gravity and special relativity by analogy with electricity and magnetism a process that both builds intuition about general relativity and indicates why it has the form that it does This approach is used to motivate the

structure of the full theory as a nonlinear field equation governing a second rank tensor with geometric interpretation and to understand its predictions by comparing it with the often qualitatively correct predictions of intermediate theories between Newton's and Einstein's. Suitable for a one semester course at junior or senior level this student friendly approach builds on familiar undergraduate physics to illuminate the structure of general relativity.

The Physics and Astrophysics of Neutron Stars Luciano Rezzolla, Pierre Pizzochero, David Ian Jones, Nanda Rea, Isaac Vidaña, 2019-01-09 This book summarizes the recent progress in the physics and astrophysics of neutron stars and most importantly it identifies and develops effective strategies to explore both theoretically and observationally the many remaining open questions in the field. Because of its significance in the solution of many fundamental questions in nuclear physics, astrophysics and gravitational physics the study of neutron stars has seen enormous progress over the last years and has been very successful in improving our understanding in these fascinating compact objects. The book addresses a wide spectrum of readers from students to senior researchers. Thirteen chapters written by internationally renowned experts offer a thorough overview of the various facets of this interdisciplinary science from neutron star formation in supernovae, pulsars, equations of state, superdense matter, gravitational wave emission to alternative theories of gravity. The book was initiated by the European Cooperation in Science and Technology COST Action MP1304 Exploring fundamental physics with compact stars NewCompStar.
