This book comprises the select peer reviewed proceedings of the 13th International Symposium on Plasticity and Impact Mechanics IMPLAST 2022. It aims to provide a comprehensive and broad spectrum picture of the state of the art research and development in diverse areas such as constitutive relations, theories of plasticity, stress waves in solids, earthquake loading, high speed impact problems, fire and blast loading, structural crashworthiness and failure mechanics of penetration and perforation among others. The contents focus on aspects of large deformations and failure of materials including metals, composites, cellular geomaterials or concrete and structures resulting from quasi static earthquake, fire, impact or blast loading. This book is a valuable resource for researchers and professionals working in academia and industry in the areas of mechanical materials and aerospace engineering.

Concrete Structures Subjected to Impact and Blast Loadings and Their Combinations Chunwei Zhang, Gholamreza Gholipour, 2022-05-08. Although much research focuses on investigating the responses of reinforced concrete (RC) structures under sole impact or blast loads, the responses of RC structures under a combination of impact and blast loads currently represent a gap in our knowledge. The combined actions of impact and blast loadings may be applied to RC structures during accidental or intentional collision of vessels, vehicles etc. carrying explosive materials. A comprehensive study on the vulnerability of various structural members is carried out using finite element (FE) simulations under combination of impact and blast loads with the variations of various loading and structural related parameters and key parameters. This book introduces various structural analysis approaches for concrete structures when subjected to extreme loads such as impact and blast loadings. The theory of the combinations of impact and blast loads is proposed that can provide primary insights to the specific readers to develop new ideas in impact and blast engineering including combined actions of extreme loads arising from real world intentional or accidental events. This book will be of value to students, undergraduate or postgraduate engineers and researchers in structural and civil engineering and specifically those who are studying and investigating the performances of concrete structures under extreme loads.

Proceedings of SECON'21 Giuseppe Carlo Marano, Samit Ray Chaudhuri, G. Unni Kartha, P. E. Kavitha, Reshma Prasad, Rinu J. Achison, 2021-09-03. This book gathers peer reviewed contributions presented at the International Conference on Structural Engineering and Construction Management SECON 21 held on 12-15 May 2021. The meeting served as a fertile platform for discussion, sharing sound knowledge and introducing novel ideas on issues related to sustainable construction and design for the future. The respective contributions address various aspects of numerical modeling and simulation in structural engineering, structural dynamics and earthquake engineering, advanced analysis and design of foundations, BIM, building energy management and technical project management. Accordingly, the book offers a valuable up to date tool and essential overview of the subject for scientists and practitioners alike and will inspire further investigations and research.
