Marin, 2016-08-23 Advanced Data Analysis and Modeling in Chemical Engineering provides the mathematical foundations of different areas of chemical engineering and describes typical applications The book presents the key areas of chemical engineering their mathematical foundations and corresponding modeling techniques Modern industrial production is based on solid scientific methods many of which are part of chemical engineering To produce new substances or materials engineers must devise special reactors and procedures

while also observing stringent safety requirements and striving to optimize the efficiency jointly in economic and ecological terms In chemical engineering mathematical methods are considered to be driving forces of many innovations in material design and process development Presents the main mathematical problems and models of chemical engineering and provides the reader with contemporary methods and tools to solve them Summarizes in a clear and straightforward way the contemporary trends in the interaction between mathematics and chemical engineering vital to chemical engineers in their daily work Includes classical analytical methods computational methods and methods of symbolic computation Covers the latest cutting edge computational methods like symbolic computational methods *Development of recommendations and methods to support assessment of soil venting performance an closure ,* **Selected Papers on Differential Equations and Analysis** ,2005 Contains translations of papers that originally appeared in the Japanese journal Sugaku This book covers a variety of topics including differential equations with free boundary singular integral operators and operator algebras It is suitable for graduate students and research mathematicians interested in analysis and differential equations *Foundations of Macroecology* Felisa A. Smith,John L. Gittleman,James H. Brown,2014-08-22 Macroecology is an approach to science that emphasizes the description and explanation of patterns and processes at large spatial and temporal scales Some scientists liken it to seeing the forest through the trees giving the proverbial phrase an ecological twist The term itself was first introduced to the modern literature by James H Brown and Brian A Maurer in a 1989 paper and it is Brown s classic 1995 study Macroecology that is credited with inspiring the broad scale subfield of ecology But as with all subfields many modern day elements of macroecology are implicit in earlier works dating back decades even centuries Foundations of Macroecology charts the evolutionary trajectory of these concepts from the species area relationship and the latitudinal gradient of species richness to the relationship between body size and metabolic rate through forty six landmark papers originally published between 1920 and 1998 Divided into two parts Macroecology before Macroecology and Dimensions of Macroecology the collection also takes the long view with each paper accompanied by an original commentary from a contemporary expert in the field that places it in a broader context and explains its foundational role Providing a solid coherent assessment of the history current state and potential future of the field Foundations of Macroecology will be an essential text for students and teachers of ecology alike *Journal of the Optical Society of America and Review of Scientific Instruments* ,1927
