Extreme Programming Explained 1999:

Extreme Programming Explained Kent Beck, 2000 Beck wants to encourage readers to re-examine their preconceptions of how software development ought to occur. He does just that in this overview of Extreme Programming, a controversial approach to software development which challenges the notion that the cost of changing a piece of software must rise dramatically over the course of time. *Extreme Programming and Agile Processes in Software Engineering* Michele Marchesi, Giancarlo Succi, 2003-05-13 The LNCS series reports state-of-the-art results in computer science research development and education at a high level and in both printed and electronic form. Enjoying tight cooperation with the R D community with numerous individuals as well as with prestigious organizations and societies LNCS has grown into the most comprehensive computer science research forum available. The scope of LNCS, including its subseries LNAI, spans the whole range of computer science and information technology including interdisciplinary topics in a variety of application fields. Book jacket Extreme Programming and Agile Processes in Software Engineering Pekka Abrahamsson, Michele Marchesi, Giancarlo Succi, 2006-06-10 This book constitutes the refereed proceedings of the 7th International Conference on Extreme Programming and Agile Processes in Software Engineering XP 2006 held in Oulu, Finland, June 2006. The book presents 16 revised full papers together with 6 experience papers, 12 poster papers, and panel summaries organized in topical sections on foundation and rationale for agile methods, effects of pair programming, quality in agile software development, and more. Extreme Programming and Agile Processes in Software Engineering Jutta Eckstein, Hubert Baumeister, 2004-06-01 Software development is being revolutionized. The heavy weight processes of the 1980s and 1990s are being replaced by light weight so-called agile processes. Agile processes move the focus of software development back to what really matters: running software. This is only made possible by accepting that software development is a creative job done by individuals and human beings. For this reason, agile software development encourages interaction, communication, and fun. This was the focus of the Fifth International Conference on Extreme Programming and Agile Processes in Software Engineering which took place between June 6 and June 10, 2004, at the conference center in Garmisch-Partenkirchen at the foot of the Bavarian Alps near Munich, Germany. In this way, the conference provided a unique forum for industry and academic professionals to discuss their needs and ideas for incorporating Extreme Programming and Agile Methodologies into their professional life under consideration of the human factor. We celebrated this year's conference by reflecting on what we had achieved in the last half-decade and we also focused on the challenges we will face in the near future. **Extreme Programming and Agile Processes in Software Engineering** Hubert Baumeister, Michele Marchesi, Mike Holcombe, 2005-06-13 Extreme Programming has come a long way since its first use in the C3 project almost 10 years ago. Agile methods have found their way into the mainstream, and at the end of last year we saw the second edition of Kent Beck's book on Extreme Programming containing a major refactoring of XP. This year, the 6th

International Conference on Extreme Programming and Agile Processes in Software Engineering took place June 18-23 in Sheeld as in the years before XP 2005 provided a unique forum for industry and academic professionals to discuss their needs and ideas on Extreme Programming and its methodologies. These proceedings reflect the activities during the conference which ranged from presentation of research papers, invited talks, posters and demonstrations, panels and activity sessions to tutorials and workshops. Included are also papers from the Ph.D. and Master's Symposium which provided a forum for young researchers to present their results and to get feedback. As varied as the activities were, the topics of the conference which covered the presentation of new and improved practices, empirical studies, experience reports and case studies, and last but not least the social aspects of agile methods. The papers and the activities went through a rigorous reviewing process. Each paper was reviewed by at least three Program Committee members and was discussed carefully among the Program Committee. Of 62 papers submitted, only 22 were accepted as full papers.

Agile Processes in Software Engineering and Extreme Programming Alberto Sillitti, Orit Hazzan, Emily Bache, Xavier Albaladejo, 2011-05-03. This book contains the refereed proceedings of the 12th International Conference on Agile Software Development XP 2011 held in Madrid, Spain, in May 2011. The year 2011 marked the 10th anniversary of the Agile Manifesto. In this spirit, the XP conference continued its fine tradition of promoting agility by disseminating new research results in a timely manner and by bringing together researchers and practitioners for a fruitful mutual exchange of experiences. As introduced for XP 2010, there were again two different program committees: one for research papers and one for experience reports. Regarding the research papers, 11 out of 56 submissions were accepted as full papers, and as far as the experience reports were concerned, the respective number was 4 out of 17 submissions. In addition to these papers, this volume also includes the short research papers, the abstracts of the posters, the position papers of the Ph.D. symposium, and the abstracts of the workshops.

Extreme Programming Refactored Don Rosenberg, Matt Stephens, 2008-01-01. Extreme Programming Refactored: The Case Against XP featuring Songs of the Extremos takes a satirical look at the increasingly hyped extreme programming XP methodology. It explores some quite astonishing Extremo quotes that have typified the XP approach, quotes such as "XPers are not afraid of oral documentation," "Schedule is the customer's problem," "Dependencies between requirements are more a matter of fear than reality," and "Concentration is the enemy." In between the chuckles, though, there is a serious analysis of XP's many flaws. The authors also examine C3, the first XP project whose team, most of whom went on to get XP, book deals shortly before C3's cancellation described themselves as the best team on the face of the Earth. In a later chapter, the authors also note that one problem which can affect pair programmers is overconfidence, or is that excessive courage. The authors examine whether the problems that led to C3's inexplicable cancellation could also afflict present-day XP projects. In the final chapter, Refactoring XP, Matt and Doug suggest some ways of achieving the agile goals of XP using some XP practices used in moderation combined with other less risk-laden methods.
