Fisher, J.H. Wandersee, D.E. Moody, 2001-11-30 Mapping Biology Knowledge addresses two key topics in the context of
biology promoting meaningful learning and knowledge mapping as a strategy for achieving this goal Meaning making and
meaning building are examined from multiple perspectives throughout the book In many biology courses students become so
mired in detail that they fail to grasp the big picture Various strategies are proposed for helping instructors focus on the big
picture using the need to know principle to decide the level of detail students must have in a given situation The
metacognitive tools described here serve as support systems for the mind creating an arena in which learners can operate on
ideas They include concept maps cluster maps webs semantic networks and conceptual graphs These tools compared and
contrasted in this book are also useful for building and assessing students content and cognitive skills The expanding role of
computers in mapping biology knowledge is also explored *Chapter Resource 27 Introduction to Animals Biology* Holt
