

Study Guide B continued**SECTION 4. TRANSCRIPTION**

1. replication (nucleus)
2. transcription (nucleus)
3. translation (cytoplasm)
4. Contains the sugar ribose
5. Has the bases A, C, G, and T
6. Typically single-stranded
7. RNA polymerase
8. A large transcription complex, including RNA polymerase and other proteins, assembles at the start of a gene and begins to unwind the DNA. Using one strand of the DNA as a template, RNA polymerase strings together a complementary strand of RNA. The RNA strand detaches from the DNA as it is transcribed, and the DNA zips back together.
9. **mRNA:** intermediate message that is translated to form a protein; **rRNA:** forms part of ribosomes; **tRNA:** brings amino acids from the cytoplasm to a ribosome to help make the growing protein
10. Both occur within the nucleus of eukaryotic cells, are catalyzed by large enzymes, involve unwinding of the DNA double helix, involve complementary base pairing of the DNA strand, and are highly regulated by the cell.
11. Replication occurs only once during each round of the cell cycle and makes a double-stranded copy of all the DNA in a cell. Transcription occurs repeatedly throughout the cell cycle to make proteins, rRNAs, and tRNAs as needed by a cell. Transcription makes a single-stranded complement of only a particular DNA sequence.
12. mRNA is a form of the DNA message that tells the cell what type of protein to make. rRNA is a key component of ribosomes. tRNA transfers, or carries, amino acids from the cytoplasm to the ribosome.
13. the process of copying a sequence of DNA to produce a complementary strand of RNA

SECTION 5. TRANSLATION

1. the process that converts an mRNA message into a polypeptide, or protein
2. sequences of three nucleotides that code for an amino acid
3. RNA
4. the order in which nucleotides are read; they are read as a series of three, nonoverlapping nucleotides
5. arginine (Arg)
6. stop codon
7. UGG
8. glycine (Gly)
9. Ribosomes, tRNA molecules
10. small
11. large
12. amino acid, anticodon

Cycle Diagram:

- A. An exposed codon attracts a complementary tRNA bearing an amino acid.
 - B. the ribosome forms a peptide bond between the amino acids. It breaks the bond between the first amino acid and tRNA.
 - C. the ribosome pulls the mRNA strand the length of one codon. The first tRNA exits the ribosome, and another codon is exposed.
13. codons
 14. anticodon
 15. Stop codons indicate where translation is to stop. (Students may mention that methionine is also a start codon.)

SECTION 6. GENE EXPRESSION AND REGULATION

1. Regulation allows the cells to better respond to stimuli and to conserve energy and materials.
2. transcription
3. promoter
4. operon, promoter, operator, genes
5. RNA polymerase is blocked by the repressor.
6. The genes are not transcribed.

Dane Scott, 2018-10-22 This book describes specific well known controversies in the genetic modification debate and connects them to deeper philosophical issues in philosophy of technology It contributes to the current far reaching deliberations about the future of food agriculture and society Controversies over so called Genetically Modified Organisms GMOs regularly appear in the press The biotechnology debate has settled into a long term philosophical dispute The discussion goes much deeper than the initial empirical questions about whether or not GM food and crops are safe for human consumption or pose environmental harms that dominated news reports In fact the implications of this debate extend beyond the sphere of food and agriculture to encompass the general role of science and technology in society The GM controversy provides an occasion to explore important issues in philosophy of technology Researchers teachers and students interested in agricultural biotechnology philosophy of technology and the future of food and agriculture will find this exploration timely and thought provoking *Resources in Education*, 1985-06 Biology Holt Rinehart & Winston, Holt, Rinehart and Winston Staff, 2000-03 *Biology, the Science of Life* Robert A. Wallace, Jack L. King, Gerald P. Sanders, 1986 New edition of a standard introductory textbook Political Biology M. Meloni, 2016-05-25 This book explores the socio political implications of human heredity from the second half of the nineteenth century to the present postgenomic moment It addresses three main phases in the politicization of heredity the peak of radical eugenics 1900 1945 characterized by an

aggressive ethos of supporting the transformation of human society via biological knowledge the repositioning after 1945 of biological thinking into a liberal democratic human rights framework and the present postgenomic crisis in which the genome can no longer be understood as insulated from environmental signals In Political Biology Maurizio Meloni argues that thanks to the ascendancy of epigenetics we may be witnessing a return to soft heredity the idea that these signals can cause changes in biology that are themselves transferable to succeeding generations This book will be of great interest to scholars across science and technology studies the philosophy and history of science and political and social theory
